2008-05-19

Dane is a thousand miles south of his home in northern New York. It's not the warm winter that keeps him off his skis, though not even Creepy Isaac, who wanders by in Mardi Gras beads and a top hat, could block Dane from a Nordic race. Guillain Barre Syndrome is the culprit, a paralyzing disease that has committed the high school senior to a hospital bed indefinitely. Days in bed pass, and Dane recalls both his former prowess and his disdain for the people in his life. Physical recovery is painfully slow, though, and it becomes clear that Dane may not fully regain the use of his body. That he may become one of the losers he abhors as this threat grows more immediate. Either Dane's icy mind will crack, or the young man will learn to thaw.

## **The Biolab Book**

1989-02

Heartfelt, deeply moving, BuzzFeed Dark and thought-provoking Publishers Weekly's stunning debut, *Voya*, a poignant lyrical debut novel about twins who navigate first love, their Jewish identity, and shocking results from a genetic test that determines their fate: whether they inherited their mother's Huntington's disease. Eighteen-year-old twins Adina and Tovah have little in common besides their ambitious nature. Viola, prodigy Adina, yearns to become a soloist and to convince her music teacher he wants her the way she wants him. Overachiever Tovah awaits her acceptance to Johns Hopkins, the first step on her path toward med school and a career as a surgeon, but one thing could wreck their carefully planned futures: a genetic test for Huntington's, a rare degenerative disease that slowly steals control of the body and mind. It's turned their Israeli mother into a near-stranger and fractured the sisters' own bond in ways they'll never admit. While Tovah finds comfort in their Jewish religion, Adina rebels against its rules. When the results come in, one twin tests negative for Huntington's, the other tests positive. These opposite outcomes push them farther apart as they wrestle with guilt, betrayal, and the unexpected thrill of first love. How can they repair their relationship, and is it even worth saving? From debut author Rachel Lynn Solomon comes a luminous, heartbreaking tale of life, death, and the fragile bond between sisters.

## **Biology**

2002

Avery Dennis is a high school senior and one of the most popular girls in her class, but a major breakup with her boyfriend threatens to ruin her plans for prom. Avery tracks down her exes and interviews them, compiling a total account of her dating history. She discovers some truths about herself along the way, just in time for prom night.

## ***I Will Find You Again***

2024-03-26

a cognitive ethnography of how bioengineering scientists create innovative modeling methods in this first full scale long term cognitive ethnography by a philosopher of science nancy j nersessian offers an account of how scientists at the interdisciplinary frontiers of bioengineering create novel problem solving methods bioengineering scientists model complex dynamical biological systems using concepts methods materials and other resources drawn primarily from engineering they aim to understand these systems sufficiently to control or intervene in them what nersessian examines here is how cutting edge bioengineering scientists integrate the cognitive social material and cultural dimensions of practice her findings and conclusions have broad implications for researchers in philosophy science studies cognitive science and interdisciplinary studies as well as scientists educators policy makers and funding agencies in studying the epistemic practices of scientists nersessian pushes the boundaries of the philosophy of science and cognitive science into areas not ventured before she recounts a decades long wide ranging and richly detailed investigation of the innovative interdisciplinary modeling practices of bioengineering researchers in four university laboratories she argues and demonstrates that the methods of cognitive ethnography and qualitative data analysis placed in the framework of distributed cognition provide the tools for a philosophical analysis of how scientific discoveries arise from complex systems in which the cognitive social material and cultural dimensions of problem solving are integrated into the epistemic practices of scientists specifically she looks at how interdisciplinary environments shape problem solving although nersessian s case material is drawn from the bioengineering sciences her analytic framework and methodological approach are directly applicable to scientific research in a broader more general sense as well
