Mathematics 2002 this book is a captivating account of a professional mathematician s experiences conducting a math circle for preschoolers in his apartment in moscow in the 1980s as anyone who has taught or raised young children knows mathematical education for little kids is a real mystery what are they capable of what should they learn first how hard should they work should they even work at all should we push them or just let them be there are no correct answers to these questions and the author deals with them in classic math circle style he doesn t ask and then answer a question but shows us a problem be it mathematical or pedagogical and describes to us what happened his book is a narrative about what he did what he tried what worked what failed but most important what the kids experienced this book does not purport to show you how to create precocious high achievers it is just one person s story about things he tried with a half dozen young children mathematicians psychologists educators parents and everybody interested in the intellectual development in young children will find this book to be an invaluable inspiring resource in the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life msri and the ams are publishing books in the mathematical circles library series as a service to young people their parents and teachers and the mathematics profession titles in this series are co published with the mathematical sciences research institute msri

Math from Three to Seven 2011 the theory of semigroups is a relatively young branch of mathematics with most of the major results having appeared after the second world war this book describes the evolution of algebraic semigroup theory from its earliest origins to the establishment of a full fledged theory semigroup theory might be termed cold war mathematics because of the time during which it developed there were thriving schools on both sides of the iron curtain although the two sides were not always able to communicate with each other or even gain access to the other s publications a major theme of this book is the comparison of the approaches to the subject of mathematicians in east and west and the study of the extent to which contact between the two sides was possible

New Course Specimen Papers in Mathematics for the Higher School Certificate Examination 1985 modern mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems thus it is par excellence a model of rational inquiry links between cognitive psychology and mathematics education have been particularly strong during the last decades indeed the enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference yet these deviations should not be called errors as cognitive psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats humans as the cognitive psychologist and economist herbert simon claimed do not usually optimize but rather satisfice even when solving problem this research topic aims at demonstrating that these insights have had a decisive impact on mathematics education we want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program in simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

New Mathematics for Elementary School 2B [?] [?] [?] [?] [?] [?] 1998 This volume gathers together twenty major chapters that tackle a variety of issues associated with equity in mathematics education along the dimensions of gender culture curriculum diversity and matters of a biological nature the pursuit of equity in mathematics education is an important concern in the history of the present since there is no doubt about the significant role of mathematics in almost every aspect of life it means that all individuals regardless of sex in any age range and in whatever context need to be provided with an opportunity to become mathematically able the publication of this springer volume on equity in mathematics education is situated at a time when there is strong and sustained research evidence indicating the persistence of an equity gap in mathematics which has now enabled the mathematics education community to engage in a discourse of access for all the research studies that are reported and discussed in the volume have been drawn from an international group of distinguished scholars whose impressive forward looking and thought provoking perspectives on relevant issues incite broaden and expand complicated conversations on how we might effectively achieve equity in mathematics education at the local institutional and systemic levels further the up to date research knowledge in the field that is reflected in this volume provides conceptual and practical outlines for mechanisms of change including models examples and usable theories that can inform the development of powerful equitable practices and the mobilization of meaningful equity interventions in different contexts of mathematics education

Paper One: Learning to Play, Playing to Learn: Using Electronic Games as Educational Tools 1884 mathematics for curriculum leaders involves teachers in a deliberate enquiry into the nature of understanding in mathematics and the ideas underlying its teaching and learning helping children with the language of mathematics is shown to play an important part in mathematics teaching the pack is divided into 7 units drawing upon the demands of the national curriculum and providing activities to support children in their attempts to report their thinking sensitive collection and interpretation of this information in order to guide action is an essential feature of each unit

Woolwich mathematical papers [afterw.] Mathematical papers for admission into the Royal military academy (and the Royal military college, and papers in elementary engineering for naval cadetships). 1889 this open access book s theme is teaching mathematics as to be meaningful foregrounding children s play and perspectives it discusses the relation between teachers children and mathematical content within the context of play with a particular focus on the framing of these relations within this context which is an important theme in the debate on whether teaching should be integrated with or separated from children s play the work further addresses meaningfulness in the learning process particularly from the child s perspective globally most guidelines and curricula for early childhood education mention play as one of the key features for young children s learning still there are quite different views on the definitions of play and in what ways play should become part of children s learning the chapters of the book mirror the research topics presented at the fifth poem conference in may 2022 divided into four sub themes play and learning children s perspectives on mathematics teachers competencies and theorizing aspects of early mathematics education
