how should the concept of evidence be understood and how does the concept of evidence apply to the controversy about creationism as well as to work in evolutionary biology about natural selection and common ancestry in this rich and wide ranging book elliot sober investigates general questions about probability and evidence and shows how the answers he develops to those questions apply to the specifics of evolutionary biology drawing on a set of

fascinating examples he analyzes whether claims about intelligent design are untestable whether they are discredited by the fact that many adaptations are imperfect how evidence bears on whether present species trace back to common ancestors how hypotheses about natural selection can be tested and many other issues his book will interest all readers who want to understand philosophical questions about evidence and evolution as they arise both in darwin s work and in contemporary biological research

evolution of living organisms evidence for a new theory of transformation discusses traditional interpretations of evolution with a new assumption the book presents a rational and general account of real evolutionary phenomena based on paleontology and molecular biological data the text reviews biological evolution from the simple to the complex or progressive and regressive evolution the author explains the appearance of types of organization from captorhinomorphs to pelycosaurs to the theriodonts from which the mammals arose he also explains that in the evolution to mammals the transformation of the theriodonts concerned only the skeleton muscles dentition and not the brain he cites the case of the perissodactyls as an example the author also asserts that paleontology and molecular biology can explain the mechanism of evolution without even detailing the causes of orientations of lineages of the finalities of structures of living functions and of cycles but this approach will involve metaphysics this book can be appreciated by anthropologists researcher and scientists involved in zoology paleontology genetics and biochemistry

evolutionists have long known that charles darwin s original argument against his own theory that a lack of fossil evidence of transitional forms would reduce him to an embarrassing footnote in history was screamingly true no legitimate fossil evidence exists that shows one species changing into another this startling realization led luther sunderland to an exhaustive search of the subject and his findings show clearly that evolution is a theory in disarray from his own interviews with leading evolutionists and an examination of the fossil evidence sunderland shows that the enigma of darwin s anti god philosophy is that the facts show it is anything but rock solid
