Dr Hamid Shafie's clinical and laboratory manual of implant overdentures is a ground-breaking guide to this popular and effective treatment modality which is increasingly seen as the standard of care for the fully edentulous patient. This highly practical step-by-step handbook provides the dentist and laboratory technician with essential instruction and sound clinical support demystifying this complex subject through systematic evaluation of the available attachment systems to produce treatment plans to best suit the patient's needs. Includes section book reviews.

Writing and publishing are at the heart of most academic and research pursuits. Many potential authors, however, feel lost in the seemingly everest-climbing-like process. There is little formal education that authors receive during their education. The little guide to getting your journal article published seeks to pull back the curtain on the process and provide essential information to lead authors to their goals. The little guide answers all of a novice author's questions in a direct and useful fashion. The book can be read all the way through or serve as a spot-reference guide as authors wind their way through the process. The book is divided into 29 short-focused chapters. Sections include getting started, selecting potential journals for submission, writing your article, submitting your article, and publication.

At last, this book has been written with a view to understand the validity of the perceptions of open access (OA) journals in the library and information science (LIS) field using relevant OA journals. This book presents and evaluates journals qualitatively and quantitatively over the last three hundred years. Scholarly journals have been the prime mode of transport in communicating the scholarly research process. However, in the last few decades, a changing scenario has been witnessed in their form and format. OA is an innovative idea that attracts a fair amount of support and opposition around the world because it bridges the gap between digitally divided scholars by solving the pricing and permission crises that have imbalanced the scholarly communication process. Some scholars are of the opinion that OA has led to a chaotic environment where anyone can publish anything. Scholarly communication in library and information services records in detail the impact by accessing the journals' web site qualitatively and quantitatively in measuring the important elements such as articles, authors, countries, subjects, and cited references. Finally, the book calculates the impact factor using synchronous and asynchronous approaches.

First-ever study to extensively evaluate LIS journals' site qualitatively by using a newly developed set of criteria. LIS OA journals are also evaluated quantitatively. Counts citations of LIS OA articles in terms of formal citations by using Google Scholar. Vols 65-96 include central law journal's international law list. This book first published in 2002 gathers some of America's top subject expert librarians to determine the most influential journals in their respective fields. 32 contributing authors reviewed journals from over twenty countries that have successfully shaped the evolution of their individual specialties worldwide. Their choices reflect the history of each discipline or profession, taking into account rivalries between universities, professional societies for profit and not-for-profit publishers, and even nation states and international ideologies. In each journal's quest for reputational dominance, each journal was judged using criteria such as longevity of publication, foresight in carving out its niche, ability to attract, sustain professional or academic affiliations, opinion leadership, or agenda-setting power, and ongoing criticality to the study or practice of their field. The book presents wholly independent reviewers; none are in the employ of any publisher, but each is fully credentialed and well-published, and many are award winners.

The authors guide college and professional school librarians on limited budgets via an exposition of their analytical and critical winnowing process. In determining the classic resources for their faculty, students, and working professional clientele, includes proceedings of the association papers read at the annual sessions and list of current medical literature. Kinanthropometry is the study of human body size, shape, and form and how those characteristics relate to human movement and sporting performance. In this fully updated and revised edition of the classic guide to kinanthropometric theory and practice, leading international sport and exercise scientists offer a clear and comprehensive introduction to essential principles and techniques. Each chapter guides the reader through the planning and conduct of practical and laboratory sessions and includes a survey of current theory and contemporary literature relating to that topic. The book is fully illustrated and includes worked examples, exercises, research data, chapter summaries, and guides to further reading throughout.

Volume two: exercise physiology covers key topics such as neuromuscular aspects of movement, skeletal muscle function, oxygen transport including haematology, pulmonary and cardiovascular functions, metabolism, and thermoregulation. VO₂ kinetics, physiological economy, efficiency, and fitness, physiological limitations to performance, assessment of energy expenditure, perceived exertion, and maximal intensity. The kinanthropometry and exercise physiology laboratory manual is essential reading for all serious students and researchers of sport and exercise science, kinesiology, and human movement.

Roger Eston is professor of human physiology and head of the school of sport and health sciences at the University of Exeter. Thomas Reilly is professor of sports science and director of the research institute for sport and exercise sciences at Liverpool. John Moores University. This book addresses key issues concerning visualization in the teaching and learning of science at any level in educational systems. It is the first book specifically on visualization in science education. The book draws on the insights from cognitive psychology, science, and education by experts from five countries. It unites these with the practice of science education, particularly the ever-increasing use of computer-managed modelling packages.
