From Electrons to Elephants and Elections 2022-04-08

this highly interdisciplinary book covering more than six fields from philosophy and sciences all the way up to the humanities and with contributions from eminent authors addresses the interplay between content and context reductionism and holism and their meeting point the notion of emergence much of today's science is reductionist bottom up in other words behaviour on one level is explained by reducing it to components on a lower level chemistry is reduced to atoms ecosystems are explained in terms of dna and proteins etc this approach fails quickly since we can't cannot extrapolate to the properties of atoms solely from schrödinger's equation nor figure out protein folding from an amino acid sequence or obtain the phenotype of an organism from its genotype an alternative approach to this is holism top down consider an ecosystem or an organism as a whole seek patterns on the same scale model a galaxy not as 400 billion point masses stars but as an object in its own right with its own properties spiral elliptic or a hurricane as a structured form of moist air and water vapour reductionism is largely about content whereas holistic models are more attuned to context reductionism content and holism context are not opposing philosophies in fact they work best in tandem join us on a journey to understand the multifaceted dialectic concerning this duo and how they shape the foundations of sciences and humanities our thoughts and the very nature of reality itself

Introduction to Construction Management 2015-01-09

management in the construction industry is a complex task with team members often undertaking hazardous work complying with stacks of regulations and legal requirements and under the constant threat of plans going awry however there is no need for all construction management textbooks to be so complicated starting with a general overview of the industry introduction to construction management is the beginner's guide to key concepts terms processes and practices associated with modern construction management in the uk supported by diagrams illustrations and case studies this book explores construction management from a variety of perspectives including production management commercial management quality management health and safety management environmental management also incorporated are important industry trends including sustainability corporate social responsibility and the advent of bim this is the most approachable text available for anyone starting to learn about construction management at hnc hnd fdsc or bsc level

XIII Mediterranean Conference on Medical and Biological Engineering and Computing 2013 2013-10-01

the general theme of medicon 2013 is research and development of technology for sustainable healthcare this decade is being characterized by the appearance and use of emergent technologies under development this situation has produced a tremendous impact on medicine and biology from which it is expected an unparalleled evolution in these disciplines towards novel concept and practices the consequence will be a significant improvement in health care and well fare i e the shift from a reactive medicine to a preventive medicine this shift implies that the citizen will play an important role in the healthcare delivery process what requires a comprehensive and personalized assistance in this context society will meet emerging media incorporated to all objects capable of providing a seamless adaptive anticipatory unobtrusive and pervasive assistance the challenge will be to remove current barriers related to the lack of knowledge required to produce new opportunities for all the society while new paradigms are created for this inclusive society to be socially and economically sustainable and respectful with the environment in this way these proceedings focus on the convergence of biomedical engineering topics ranging from formalized theory through experimental science and technological development to practical clinical applications

Regional Governance in Post-NAFTA North America 2014-10-30

twenty years after nafta the consensus seems to be that the regional project in north america is dead the trade agreement was never followed up by new institutions that might cement a more

ambitious regional community the security and prosperity partnership spp launched with some fanfare in 2005 was quietly discontinued in 2009 and new cooperative ventures like the us canada beyond the border talks and the us mexico merida initiative suggest that the three governments have reverted to the familiar pre nafta pattern of informal incremental bilateralism one could argue however that nafta itself has been buried and yet the region somehow lives on albeit in a form very different from regional integration in other parts of the world a diverse group of contributors from the united states canada and mexico with experience in academia government service think tanks and the private sector bring to bear a sophisticated and much needed examination of regional governance in north america its historical origins its connection to the regional distribution of power and the respective governments domestic institutions and the variance of its forms and function across different issue areas the editors begin by surveying the literature on north american regional politics matching up developments there with parallel debates and controversies in the broader literatures on comparative regional integration and international policy coordination more generally six contributors later explore the mechanisms of policy coordination in specific issue areas each with an emphasis on a particular set of actors and with its own way of characterizing the relevant political and diplomatic dynamics chapters on the political context for regional policy coordination follow leading to concluding remarks on the future of north america at a time when scholarly interest in north america seems to be waning even while important and interesting political and economic developments are taking place this volume will reinvigorate the study of north america as a region to better understand its past present and future

Italy's Top Products in World Trade 2015-03-06

this book analyzes italy s external competitiveness in detail and introduces a new index devised by marco fortis and stefano corradini for fondazione edison that highlights the strengths of italy s foreign trade compared with the trade performance index compiled and updated annually by unctad wto s international trade centre the fortis corradini index fci provides greater sectorial detail by referring to 5117 products identified according to the six digit hs 1996 international classification available on the un comtrade database the new index confirms that contrary to widespread opinion italy is one of the world s most competitive countries with an extraordinary position of leadership in world trade thus according to the fci for 932 products italy was either first second or third worldwide in terms of foreign trade surplus in 2012 furthermore the fci reveals for example that only three countries china germany and the united states surpassed italy in 2012 in terms of the number of first second and third places in their trade balance worldwide in presenting the fci and meticulous statistical data this highly original study will be of wide interest
