The Caldwell Objects and How to Observe Them 2015-09-30

when mike inglis who consults for springer rst asked me to write a caldwell book in their and how to observe them series i admit i did need some time to think the suggestion over i am a fan of patrick s caldwell catalog as are most of the amateur astronomers i know but could a new book be justi ed when the massive compreh sive and wrist spraining caldwell tome by stephen o meara covers the subject fully anyway that other book was researched and written over a 5 year period in the pre 9 11 world from 1996 to 2001 and its 484 pages of descriptive text and background data are a joy to peruse as are stephen s impressive sketches ok the book is far too heavy for the binding and after a few trips outside half the pages in my copy fell out but apart from that it is an excellent book and surely impossible to improve upon or even equal especially in a smaller format book with only half the pages available at least that was my initial impression when i mulled over writing another caldwell book however i changed my mind because a number of events of astronomical signi cance have occurred in the last 10 years first and foremost backyard imaging of deep sky objects especially color im ing has come on in leaps and bounds in the twenty rst century

the health of scientific enterprise has become a critical political and social issue as nation states tackle austerity diversity global challenges whilst simultaneously supporting a competitive and innovative national economy a key asset in achieving such ambitions is for a scholarly information system which enables the fruits of the research effort to be disseminated efficiently as the information support system struggles with adapting from a print based to a digital process the dysfunctionality current within stem publishing in particular becomes evident new ways of supporting research are emerging which require a new approach to publishing an approach which takes on board the many demographic social technical and administrative changes taking place in both science itself and society a radical strategic assessment is required and this book tracks key aspects required for any new future strategy this book provides a catalogue of issues to which a future stem information industry will need to adapt they range from the effects of technology on the neurological processes of research to the growing use of technology to speed up the exchange of information among groups and laboratories from considerations about quality control yet maintaining intellectual ownership from changing from an elitist stem system favouring academics to a more democratic process with wider appeal there is the neglected non academic market and its need to share in the results of the research effort often through partnership and being part of a hive mind this is the large world of the unaffiliated knowledge workers of which academia is numerically but a small part the many changes taking place in scholarly information dictate that the future is unlikely to be a smooth and gradual evolution from the past radical new approaches are required a revolution which takes on board the perfect storm of changes listed in this book just as such changes have changed the face of industries such as music and retail in recent years so similar dramatic changes are likely to result in a restructuring of stem into a more technologically focused industry within the next decade the implications for the current stem stakeholders are profound
