Accounting - The Basis for Business Decisions 2013-10 many scholars discuss marx s capital from many perspectives but accounting for value uniquely advances and defends an accounting interpretation of his theory of value that he used it to explain capitalists accounts it confirms and builds on the temporal single system interpretation s refutation of the charge that marx s illustration of the transformation from values to prices is inconsistent and its defense of his law of the tendential fall in the rate of profit it rejects other interpretations by showing that only a temporal single system interpretation is consistent with marx s accounting the book shows that marx became seriously interested in accounts from the late 1850s during an important period in the development of his critique of political economy asking engels for information and explanations examining their letters in the context of marx s evolving work it argues supports the hypothesis that discovering he could explain them with his theory of value gave him the breakthrough he needed to decide how to present his work and explains why in 1862 he decided to change its title to capital marx s explanations of capitalist accounting it concludes amount to an accounting theory that explains how individual capitalists and the capital market use what is for many the invisible hand of accounting to control the production and distribution of surplus value marx claimed his theory of value was a work of science a critique of political economy that would deliver a theoretical blow from which the bourgeoisie would never recover he failed critics argue because his critique depends on hypothetical entities which we cannot directly observe such as value and abstract labour surplus value which means his theory is not open to empirical refutation the book however argues that he used his theory of value to explain the phenomenal forms of profit rate of profit etc by explaining the observable accounting principles and practices capitalists use to calculate and control them in which as he said we can glimpse the determination of value by socially necessary labor time which experience could have refuted

Accounting Theory and Practice 2015-08-31 historians have not convincingly explained modern capitalism s two major economic crises the great depression of the 1930s and the global financial crisis gfc of 2008 2009 accounting for crises offers a new explanation why both began and were more severe in the usa america based on an accounting interpretation of marx s theory of crises it explains their origins in capitalists control of accumulation which reveals important overlooked roles for irving fisher s accounting theory this theory by allowing discretion in accounts in the context of falling rates of profit encouraged swindling overstating reported profits and understating their risk which facilitated and aggravated both crises framed by fisher s theory during the 1920s american accounting theorists justified discretion which creating the big mess the companion volume concluded it management used to conservatively smooth earnings accounting for crises shows that fisher s theory also underlays the popular new theory of investment that justified valuing shares using reported earnings which encouraged their manipulation and legitimized speculation this it argues underlays america s exceptional late 1920s stock market boom the 1929 great crash and the depth and length of its great depression prominently associated with the boom fisher became unpopular after the crash his name disappearing from public debate nevertheless the book concludes his

theory hindered economic recovery weakened 1930s reforms undermined accounting regulation from the late 1930s and following his rehabilitation from the late 1950s underlies the financial accounting standards board's conceptual framework which by allowing off balance sheet accounting for securitization spes fostered the 2007 credit crunch that triggered the 2008 2009 global financial crisis gfc

Excel University Volume 3 - Featuring Excel 2013 for Windows 2003-11-01 this book examines the conceptual development of control in the literature of both management and accounting disciplines from 1900 to 1980 in order to portray the development of control concepts over time the chapters are organized into sections relating to the schools of thought from which they emanated and a model of control is constructed to represent each group of concepts and their hypothesised inter relationships having traced the development of control models a comparative analysis of historical development in the two streams of management and accounting literature is undertaken this analysis reveals a pronounced lag of accounting development behind that of management literature the reasons for this are then discussed

Mergers Acquisitions and Buyouts 2002 winner of the management accounting section of the american accounting association notable contribution to management accounting literature award volume one of the handbook of management accounting research series sets the context for the handbooks with three chapters outlining the historical development of management accounting as a discipline and as a practice in three broad geographic settings volume two provides insights into research on different management accounting practices volume three features contributions from some of the most influential researchers in various areas of management accounting research consolidates the content of volumes one and two and concludes with examples of management accounting research from around the world volumes 1 2 and 3 are also available as individual product isbn volume 1 978 0 08 044564 9 isbn volume 2 978 0 08 044754 4 isbn volume 3 978 0 08 055450 1 three volumes of the popular handbooks of management accounting research series now available in one complete set examines particular management accounting practices and specific organizational contexts adopts a global perspective of management accounting practices award winner of the management accounting section of the american accounting association notable contribution to management accounting literature award

Mergers Acquisitions & Buyouts June 2002 2018-07-04 almost all economists whether classical neoclassical or marxist have failed in their analyses of capitalism to consider the underpinning systems of accounting this book draws attention to this lacuna focusing specifically on the concept of capital a major concept that dominates all teaching and practice in both economics and management it is argued that while for the practitioners of capitalism in accounting and business the capital in their accounts is a debt to be repaid or a thing to be kept for

economists it has been considered a means or even a resource or an asset intended to be worn out this category error has led to economists failing to comprehend the true nature of capitalism on this basis this book proposes a new definition of capitalism that brings about considerable changes in the attitude to be had towards this economic system in particular the means to bring about its replacement this book will be of significant interest to readers of political economy history of economic thought critical accounting and heterodox economics

Two Column Ledger 2017-09-07 this book first published in 1988 is a study of the development of accounting in eighteenth century scotland the investigation is organised around a survey of early scottish accounting texts an analysis of their exposition of the italian method of book keeping and their treatment of certain selected topics the aim is to evaluate the contribution that these scottish accountants made to the development of a profession
