this book grew from a one semester course offered for many years to a mixed audience of graduate and undergraduate students who have not had the luxury of taking a course in measure theory the core of the book covers the basic topics of independence conditioning martingales convergence in distribution and fourier transforms in addition there are numerous sections treating topics traditionally thought of as more advanced such as coupling and the kmt strong approximation option pricing via the equivalent martingale measure and the isoperimetric inequality for gaussian processes the book is not just a presentation of mathematical theory but is also a discussion of why that theory takes its current form it will be a secure starting point for anyone who needs to invoke rigorous probabilistic arguments and understand what they mean
