advances in the practice of psychiatry have occurred in fits and starts over the last several decades these advances are evident to anyone long affiliated with the field and are best appreciated through direct experience of living through the times these advances can also be gleaned from historical overviews in textbooks or the recollections of one s teachers and mentors returning to the original papers that have ushered in these changes is rarely done for various mostly practical reasons filtering through thousands of articles in psychiatry may prove daunting access to the manuscripts may be limited especially for papers not available electronically and understanding their impact requires a broader context moreover with so much active research currently occurring in various branches of psychiatry current practitioners or trainees may find their attention focused on the present and this is reinforced by electronic search algorithms which return articles in reverse chronological order not surprisingly citations for articles in virtually all fields decline precipitously for articles over five years old as scholars and professionals we are losing touch with our academic heritage yet navigating the

essential guide by one of america's leading doctors to how digital technology enables all of us to take charge of our health a trip to the doctor is almost a guarantee of misery you'll make an appointment months in advance you'll probably wait for several hours until you hear the doctor will see you now but only for fifteen minutes then you'll wait even longer for lab tests the results of which you'll likely never see unless they indicate further and more invasive tests most of which will probably prove unnecessary much like physicals themselves and your bill will be astronomical in the patient will see you now eric topol one of the nation's top physicians shows why medicine does not have to be that way instead you could use your smartphone to get rapid test results from one drop of blood monitor your vital signs both day and night and use an artificially intelligent algorithm to receive a diagnosis without having to see a doctor all at a small fraction of the cost imposed by our modern healthcare system the change is powered by what topol calls medicine's guttenberg moment much as the printing press took learning out of the hands of a priestly class the mobile internet is doing the same for medicine giving us unprecedented control over our healthcare with smartphones in hand we are no longer beholden to an impersonal and paternalistic system in which doctor knows best medicine has been digitized topol argues now it will be democratized computers will replace physicians for many diagnostic tasks citizen science will give rise to citizen medicine and enormous data sets will give us new means to attack conditions that have long been incurable massive open online medicine where diagnostics are done by facebook like comparisons of medical profiles will enable real time real world research on massive populations there's no doubt the path forward will be complicated the medical establishment will resist these changes and digitized medicine inevitably raises serious issues surrounding privacy nevertheless the result better cheaper and more human health care will be worth it provocative and engrossing the patient will see you now is essential reading for
