A Casebook of Medical Ethics 1989 paternalism in the therapeutic relationship duties to patient and family deciding for others medical research involving human subjects physicians third parties and society  
**Bioethics for Health Professionals** 1996 a bioethics text which provides an introduction as well as a critical approach to the field of bioethics includes new categories of analysis and a social and contextual model of bioethical behaviour discusses a range of bioethical issues and is written in non technical language includes figures and diagrams an appendix list of references and an index the author teaches in the department of sociology at the ANU and his works include transsexualism in society and social science methodology also available in hardback

**Duties to Others** 2012-12-06 despite reservoirs of moral discourse about duties in religious communities professional caregiving traditions and philosophical perspectives the dominant moral language in contemporary biomedical ethics is that of rights duties to others begins to correct this imbalance in our ethical language through theoretical expositions of the ideas of duty and of the other and by applied exemplifications of particular duties to identified others that arise in the context of health care a pronounced multidisciplinary orientation informs this analysis of our moral call to respond to the needs of others the essays in this volume offer a stimulating intellectual freshness through a continual engagement of theological professional and philosophical understandings of the duties that arise in our relationships with others in medicine nursing and social contexts duties to others provides provocative challenges about the terrain of our moral world for both students and professionals in biomedical ethics medicine philosophy and theology

**Informed Consent** 1992-12-31 substantial efforts have recently been made to reform the physician patient relationship particularly toward replacing the silent world of doctor and patient with informed patient participation in medical decision making this new ethos of patient autonomy has especially insisted on the routine provision of informed consent for all medical interventions strongly supported by most bioethicists and the law as well as more popular writings and expectations it still seems clear that informed consent has at best been received in a lukewarm fashion by most clinicians many simply rejecting what they commonly refer to as the myth of informed consent the purpose of this book is to defuse this seemingly intractable controversy by offering an efficient and effective operational model of informed consent this goal is pursued first by reviewing and evaluating in detail the agendas arguments and supporting materials of its proponents and detractors a comprehensive review of empirical studies of informed consent is provided as well as a detailed reflection on the common clinician experience with attempts at informed consent and the exercise of autonomy by patients in the end informed consent is recast as a management tool for pursuing clinically and ethically important goods and values that any clinician should see as meriting pursuit concurrently the model incorporates a flexible anticipatory approach that recognizes that no static generic ritual can legitimately pursue the quite variable goods and values that may be at stake with different patients in different situations finally efficiency of provision is addressed by not pursuing the unattainable and ancillary throughout the traditional principle of beneficence is appealed to toward articulating an operational model of informed consent as an intervention that is likely to change outcomes at the bedside for the better

**Clinical Medical Ethics Cases and Readings** 1995 while many books in medical ethics are theory oriented this book is case oriented it is comprised of clinical cases readings and an ethical work up guide for resolving moral problems in patient care the cases are grouped according to broad categories ranging from reproduction to dying and represent actual medical situations including clinical detail the ethical work up guide introduces students to a model of moral reasoning which can be applied to difficult cases in patient care as one approach to resolving moral dilemmas clinical medical ethics works to help students become proficient at doing research and thinking embodied in moral analysis of clinical cases

**The Ethics of Screening in Health Care and Medicine** 2011-09-25 medical or health oriented screening programs are amongst the most debated aspects of health care and public health practices in health care and public health ethics as well as health policy discussions in spite of this most treatments of screening in the research literature restrict themselves to isolated scientific aspects sometimes complemented by economic analyses or loose speculations regarding policy aspects at the same time recent advances in medical genetics and technology as well as a rapidly growing societal focus on public health concerns inspires an increase in suggested or recently started screening programs this book involves an in depth analysis of the ethical political and philosophical issues related to health oriented screening programs it explores the considerations that arise when health care interacts with other societal institutions on a large scale as is the case with screening what values may be promoted or compromised by screening programs what conflicts of values do typically arise both internally and in relation to the goals of health care on the one hand and the goals of public health and the general society on the other what aspects of screening are relevant for determining whether it should be undertaken or not and how it should be organised in order to remain defensible what implications does the ethics of screening have for health care ethics as a whole these questions are addressed by applying philosophical methods of conceptual analysis as well as models and theories from moral and political philosophy medical ethics and public health ethics to a large number of ongoing and proposed screening

programs which makes this book the first comprehensive work on the ethics of screening analyses and suggestions are made that are of potential interest to health care staff medical researchers policy makers and the general public

Ethics Consultation 1994 this is a book about clinical ethics consultation by two practitioners who together have done more than 700 consultations there is not another authoritative book like it practical rather than theoretical in scope the book addresses strategies for conducting consultations relating to patients at the bedside investigating the ethical issues making recommendations following up on cases and keeping records chapters include issues such as the need for training the skills needed the problem of certification how to set up a practice financial compensation and billing and the relation of the consultant to committees particularly ethics committees the authors include reflections about learning clinical ethics and education of committees hospital staff and the general public about issues that arise the purpose is to help ethics consultants improve their conscious assessment of their work both how they go about it and its legitimacy for patients health care providers and hospitals the orientation is primarily on clinical care of patients because the goal of such consultations is always aimed to improve patient care other ethics consultants might work to develop institutional policies although that is touched on in the book it is not the primary goal of the authors the book is aimed at the practitioner in bioethics in a clinical setting

Patient Autonomy and the Ethics of Responsibility 2005 the principle of patient autonomy dominates the contemporary debate over medical ethics in this examination of the doctor patient relationship physician and philosopher alfred tauber argues that the idea of patient autonomy which was inspired by other rights based movements of the 1960s was an extrapolation from political and social philosophy that fails to ground medicine's moral philosophy he proposes instead a reconfiguration of personal autonomy and a renewed commitment to an ethics of care in this formulation physician beneficence and responsibility become powerful means for supporting the autonomy and dignity of patients beneficence tauber argues should not be confused with the medical paternalism that fueled the patient rights movement rather beneficence and responsibility are moral principles that not only are compatible with patient autonomy but strengthen it coordinating the rights of patients with the responsibilities of their caregivers will result in a more humane and robust medicine tauber examines the historical and philosophical competition between facts scientific objectivity and values patient care in medicine he analyzes the shifting conceptions of personhood underlying the doctor patient relationship offers a topology of autonomy from locke and kant to hume and mill and explores both philosophical and practical strategies for reconfiguring trust and autonomy framing the practicalities of the clinical encounter with moral reflections tauber calls for an ethical medicine in which facts and values are integrated and humane values are deliberately included in the program of care

Medical Ethics 2000 this cutting edge anthology of recent articles explores important contemporary ethical issues that arise in the health care professions argument based in style and tone it features unique first person interviews with prominent practitioners in biomedicine case studies from both the administrative and front line perspectives and a worldview methodology for linking theory to action explores such areas as the hippocratic oath paternalism and autonomy privacy and confidentiality informed consent gender issues genetic engineering euthanasia abortion and healthcare policy in the united states with regard to the right to healthcare and to the allocation of transplants for anyone in the biomedical professions including biomedical or laboratory administrators managers or supervisors as well as practitioners such as physicians nurses or other health care professionals who deal directly with patients
