the polarity of a sentence is crucial for its meaning it is thus hardly surprising that languages have developed devices to highlight this meaning component and to contrast statements with negative and positive polarity in discourse research on this issue has started from languages like german and dutch where prosody and assertive particles are systematically associated with polarity contrast recently the grammatical realization of polarity contrast has been at the center of investigations in a range of other languages as well core questions concern the formal repertoire and the exact meaning contribution of the relevant devices the kind of contrast they evoke and their relation to information structure and sentence mood this volume brings together researchers from a theoretical an empirical and a typological orientation and enhances our understanding of polarity with the help of in depth analyses and cross linguistic comparisons dealing with the syntactic semantic pragmatic and or prosodic aspects of the phenomenon

in recent years a number of authors de vries 2009 truckenbrodt 2015 ott and de vries 2016 inter alia have defended that right dislocations rd should be treated as bisentential structures where the dislocated constituent is actually a remnant of a clausal ellipsis operation licensed under identity with an antecedent clause although romance rd is a fertile area of research the consequences of the biclausal analysis remain unexplored in these languages this monograph intends to fill this gap adopting this approach not only solves some issues that have always been at the core of dislocation structures in general it also allows us to uncover novel sets of data and to provide straightforward explanations for well known generalizations further it brings rd along with a set of phenomena which are structurally very similar like afterthoughts or split questions which have been independently argued to display a bisentential structure under alternative monoclausal approaches to rd the striking similarities between these phenomena must be rendered anecdotal

the fundamentally simple logic of language learning a second language with the tools of the native speaker presents a data driven approach to understanding how native speakers do not use subject and direct object to process language native speakers know who does what in a sentence by applying intuitively two simple inferences that are argued to be part of universal grammar the book explains and exemplifies these two inferences throughout these two inferences explain the native speaker s ease of acquisition and use and answer difficult questions for linguistics transitivity case semantic roles in such a way that undergraduate students and second language learners can understand these concepts and apply them to their own language acquisition while spanish is used as the primary example the theory can be applied to many other languages this book will appeal to teachers and learners of any second language as well as linguists interested in second language acquisition in second language teaching and in argument structure
