the step by step guide to building world class portlet solutions fast portlet development traditionally has been difficult and time consuming requiring costly resources and specialized expertise in multiple technologies ibm websphere portlet factory simplifies and accelerates portlet development enabling developers to build world class portlet solutions without in depth knowledge of portal technology expert developer david bowley walks you through several of today s most common portlet development scenarios demonstrating how to create powerful robust portlets quickly and cost effectively each walkthrough contains all the step by step instructions detailed guidance fast answers and working sample code you need to get tangible results immediately the best resource available on websphere portlet factory this book reflects bowley s unsurpassed experience constructing large enterprise portals bowley covers everything from back end integration to user interface and ajax techniques helping you choose the right builder tool for each task and define high level instructions that generate superior code artifacts his example projects are simple enough to understand easily but sophisticated enough to be valuable in real world development this book will be indispensable to every developer who wants to succeed with websphere portlet factory including java j2ee and soa developers at all levels of expertise as well as lotus notes developers transitioning to websphere portal coverage includes creating robust portlets tips tricks shortcuts and previously undocumented gotchas incorporating services domino views forms and sql data sources into your portlets formatting information for more effective display adding ui controls charts validation java methods and other capabilities displaying context sensitive content using ajax in your portlets communicating between portlets implementing error handling logging and security

Exploring IBM E-business Software

2003

this ibm redpaper publication provides a broad understanding of a new architecture of the ibm power e1080 also known as the power e1080 server that supports ibm aix ibm i and selected distributions of linux operating systems the objective of this paper is to introduce the power e1080 the most powerful and scalable server of the ibm power portfolio and its offerings and relevant functions designed to support up to four system nodes and up to 240 ibm power10tm processor cores the power e1080 can be initially ordered with a single system node or two system nodes configuration which provides up to 60 power10 processor cores with a single node configuration or up to 120 power10 processor cores with a two system nodes configuration more support for a three or four system nodes configuration is to be added on december 10 2021 which provides support for up to 240 power10 processor cores with a full combined four system nodes server designed to support up to 64 tb memory the power e1080 can be initially ordered with the total memory ram capacity up to 8 tb more support is to be added on december 10 2021 to support up to 64 tb in a full combined four system nodes server designed to support up to 32 peripheral component interconnect pcie gen 5 slots in a full combined four system nodes server and up to 192 pcie gen

3 slots with expansion i o drawers the power e1080 supports initially a maximum of two system nodes therefore up to 16 pcie gen 5 slots and up to 96 pcie gen 3 slots with expansion i o drawer more support is to be added on december 10 2021 to support up to 192 pcie gen 3 slots with expansion i o drawers up to over 4 000 directly attached serial attached scsi sas disks or solid state drives ssds up to 1 000 virtual machines vms with logical partitions lpars per system system control unit providing redundant system master flexible service processor fsp supports ibm power system private cloud solution with dynamic capacity this publication is for professionals who want to acquire a better understanding of power servers the intended audience includes the following roles customers sales and marketing professionals technical support professionals ibm business partners independent software vendors isvs this paper does not replace the current marketing materials and configuration tools it is intended as an extra source of information that together with existing sources can be used to enhance your knowledge of ibm server solutions

the ever growing number of application scenarios for it systems leads to a significant increase in their number and hence to a level of complexity that has grown tremendously in comparison with early it installations by the mid of the past decade in numerous attempts to integrate these diverging application stacks various prominent methods have emerged in the past most recently the topic of eai which strives to achieve a consolidated view at diverse application systems however the emergence and rise of cloud based services leads to new challenges to deal with usage of offerings from a no further specified cloud appears appealing for it decision makers since it promises cost savings while even enhancing flexibility to quickly respond to changing market needs to further support this idea this work focuses on the aspect of inter organisational networks that are characterised by short setup times and short time to market in order to achieve innovative products emerging from the cooperation between different actors in this context proper backing by dedicated ict components is one of the key challenges this book therefore demonstrates how portal systems acting as intermediary between providers and consumers can be embedded into networked enterprises by providing seamless access to all relevant information to achieve this this book presents a generic architecture that can serve as a blueprint for future implementations for the type of enterprise portals introduced previously and focuses on integration of external services in a user centric manner concentrating on the user and his specific needs to achieve productivity and user satisfaction gains moreover secure communication facilities allow to consider the current application and or user context to control exchange of information between different applications integrated on the portal platform
