

computer science computation and language submitted on 10 sep 2014 v1 last revised 14 dec 2014 this version v3 sequence to sequence learning with neural networks
ilya sutskever oriol vinyals quoc v le deep neural networks dnns are powerful models that have achieved excellent performance on difficult
we propose a new framework for estimating generative models via an adversarial process in which we simultaneously train two models a generative model g that captures the data distribution and a discriminative model d that estimates the probability that a sample came from the training data rather than g
very deep convolutional networks for large scale image recognition karen simonyan andrew zisserman in this work we investigate the effect of the convolutional network depth on its accuracy in the large scale image recognition setting
we propose a new generative model 1 estimation procedure that sidesteps these difficulties in the proposed adversarial nets framework the generative model is pitted against an adversary a discriminative model that learns to determine whether a sample is from the model distribution or the data distribution

yoonyoung kim we report on a series of experiments with convolutional neural networks cnn trained on top of pre trained word vectors for sentence level classification tasks we show that a simple cnn with little hyperparameter tuning and static vectors achieves excellent results on multiple benchmarks
