Decision Management Systems 2009-07-14 sap is a market leader in enterprise business application software sap solutions provide a rich set of composable application modules and configurable functional capabilities that are expected from a comprehensive enterprise business application software suite in most cases companies that adopt sap software remain heterogeneous enterprises running both sap and non sap systems to support their business processes regardless of the specific scenario in heterogeneous enterprises most sap implementations must be integrated with a variety of non sap enterprise systems portals messaging infrastructure business process management bpm tools enterprise content management ecm methods and tools business analytics ba and business intelligence bi technologies security systems of record systems of engagement the tooling included with sap software addresses many needs for creating sap centric environments however the classic approach to implementing sap functionality generally leaves the business with a rigid solution that is difficult and expensive to change and enhance when sap software is used in a large heterogeneous enterprise environment sap clients face the dilemma of selecting the correct set of tools and platforms to implement sap functionality and to integrate the sap solutions with non sap systems this ibm redbooks publication explains the value of integrating ibm software with sap solutions it describes how to enhance and extend pre built capabilities in sap software with best in class ibm enterprise software enabling clients to maximize return on investment roi in their sap investment and achieve a

balanced enterprise architecture approach this book describes ibm reference architecture for sap a prescriptive blueprint for using ibm software in sap solutions the reference architecture is focused on defining the use of ibm software with sap and is not intended to address the internal aspects of sap components the chapters of this book provide a specific reference architecture for many of the architectural domains that are each important for a large enterprise to establish common strategy efficiency and balance the majority of the most important architectural domain topics such as integration process optimization master data management mobile access enterprise content management business intelligence devops security systems monitoring and so on are covered in the book however there are several other architectural domains which are not included in the book this is not to imply that these other architectural domains are not important or are less important or that ibm does not offer a solution to address them it is only reflective of time constraints available resources and the complexity of assembling a book on an extremely broad topic although more content could have been added the authors feel confident that the scope of architectural material that has been included should provide organizations with a fantastic head start in defining their own enterprise reference architecture for many of the important architectural domains and it is hoped that this book provides great value to those reading it this ibm redbooks publication is targeted to the following audiences client decision makers and solution architects leading enterprise transformation projects and wanting to gain further insight so that they can benefit from the integration of ibm software in large scale sap projects it architects and consultants integrating ibm technology with sap solutions

BDEIM 2022 2015-01-13 work practices and organizational processes vary widely and evolve constantly the technological infrastructure has to follow allowing or even supporting these changes traditional approaches to software engineering reach their limits whenever the full spectrum of user requirements cannot be anticipated or the frequency of changes makes software reengineering cycles too clumsy to address all the needs of a specific field of application moreover the increasing

importance of infrastructural aspects particularly the mutual dependencies between technologies usages and domain competencies calls for a differentiation of roles beyond the classical user designer dichotomy end user development eud addresses these issues by offering lightweight use time support which allows users to configure adapt and evolve their software by themselves eud is understood as a set of methods techniques and tools that allow users of software systems who are acting as non professional software developers to 1 create modify or extend a software artifact while programming activities by non professional actors are an essential focus eud also investigates related activities such as collective understanding and sense making of use problems and solutions the interaction among end users with regard to the introduction and diffusion of new configurations or delegation patterns that may also partly involve professional designers
