world's largest global IT media network InfoWorld is targeted to senior IT professionals. Content is segmented into channels and topic centers. InfoWorld also celebrates people, companies, and projects. Industrial clusters in Silicon Valley, Hsinchu Park, and Northern Italy, and in the vicinity of Cambridge, UK, have captured the imagination of policymakers, researchers, city planners, and business people. Where clusters take root, they can generate valuable spillovers, promote innovation, and create the critical industrial mass for sustained growth. For cities such as Kitakyushu, Japan, that are faced with the erosion of their traditional industrial base and are threatened by economic decline, creating a cluster that would reverse the downward trends is enormously attractive. Growing industrial clusters in Asia offers practical guidance on the nature of clusters and the likely efficacy of measures that could help build a cluster. It draws on the experience of both established dynamic clusters and newly emerging ones that show considerable promise. The insights that result from its analysis will be of particular interest to policy makers, urban planners, business people, and researchers. For more than 20 years, Network World has been the premier provider of information, intelligence, and insight for network and IT executives responsible for the digital nervous systems of large organizations. Readers are responsible for designing, implementing, and managing the voice, data, and video systems their companies use to support everything from business-critical applications to employee collaboration and electronic commerce.
