Applying Computational Intelligence 2009-11-28

in theory there is no difference between theory and practice but in practice there is jan I a van de snepscheut the ow of academic ideas in the area of computational intelligence has penetrated industry with tremendous speed and persistence thousands of applications have proved the practical potential of fuzzy logic neural networks evolutionary computation swarm intelligence and intelligent agents even before their theoretical foundation is completely understood and the popularity is rising some software vendors have pronounced the new machine learning gold rush

to transfer data into gold new buzzwords like data mining genetic algorithms and swarm optimization have enriched the top executives vocabulary to make them look more visionary for the 21st century the phrase fuzzy math became political jargon after being used by us president george w bush in one of the election debates in the campaign in 2000 even process operators are discussing the performance of neural networks with the same passion as the performance of the dallas cowboys however for most of the engineers and scientists introducing computational intelligence technologies into practice looking at the growing number of new approaches and understanding their theoretical principles and potential for value creation becomes a more and more difficult task

an updated examination of what's weakening the u s economy and how to fix it the committee to destroy the world inside the plot to unleash a super crash on the global economy is a passionate and informed analysis of the struggling global economy in this masterfully conceived and executed work michael lewitt one of wall street's most respected market strategists and money managers updates his groundbreaking examination of the causes of the 2008 crisis and argues that economic and geopolitical conditions are even more unstable today his analysis arrives in time for the impending economic and geopolitical debates of the 2016 election season lewitt explains in detail how debt has now overrun the world's capacity how federal policies of the past few decades have created a downward vortex sapping growth and vitality from the american economy and how greed and corruption are preventing reform the financial crisis created tens of trillions of debt leaving investors to pay a huge price for these policy failures the highest asset inflation we've seen in our lifetimes although the government claims there isn't enough inflation more than 2 trillion of stock buybacks funded with low cost debt that are artificially inflating stock prices the federal reserve and other global central banks becoming the largest buyers of government debt in order to suppress interest rates an m a boom resulting from companies needing to find growth

outside of their core businesses while the financial media misses the story lewitt pulls no punches explaining how all of these trends are leading to the brink of another crisis lewitt lays out a survival plan for the average investor to protect their assets when the debt bubble bursts the first edition of this book expressed hope that policymakers would not let the financial crisis go to waste this book urges investors to learn from the crushed hope and take action before the next crisis

Real World Sales Strategies that Work 2003

real world engineering problems often require concurrent optimisation of several design objectives which are conflicting in most of the cases such an optimisation is generally called multi objective or multi criterion optimisation the area of research that applies evolutionary methodologies to multi objective optimisation is of special and growing interest it brings a solution to many yet opened real world problems and questions generally multi objective engineering problems have no single optimal design but several solutions of equal efficiency allowing different trade offs the decision maker s preferences are normally used to select the most adequate design such preferences may be dictated before or after the optimisation takes place they may also be introduced interactively at different levels of the optimisation process multi objective optimisation methods can be subdivided into classical and evolutionary the classical methods usually aim at a single solution while the evolutionary methods target a whole set of so called pareto optimal solutions of the evolutionary multi objective optimisation research area and related new trends furthermore it reports many innovative designs yielded by the application of such optimisation methods the contents of the book are divided into

two main parts evolutionary multi objective optimisation and evolutionary multi objective designs

interdisciplinarity has become a buzzword in academia as research universities funnel their financial resources toward collaborations between faculty in different disciplines in theory interdisciplinary collaboration breaks down artificial divisions between different departments allowing more innovative and sophisticated research to flourish but does it actually work this way in practice investigating interdisciplinary collaboration puts the common beliefs about such research to the test using empirical data gathered by scholars from the united states canada and great britain the book's contributors critically interrogate the assumptions underlying the fervor for interdisciplinarity their attentive scholarship reveals how for all its potential benefits interdisciplinary collaboration is neither immune to academia's status hierarchies nor a simple antidote to the alleged shortcomings of disciplinary study chapter 10 is available open access here [ncbi.nlm.nih.gov/books/nbk395883](https://www.ncbi.nlm.nih.gov/books/nbk395883)
