considering how literary texts address the transformations that brazil has undergone since its 1985 transition to democracy this study proposes that brazilian contemporary literature is informed by the struggle for social civil and cultural rights and that literary production has created spaces for historically disenfranchised communities

a series of urban problems such as dwelling deficit infrastructure problems inefficient services environmental pollution etc can be observed in many countries urban engineering searches solutions for these problems using a conjoined system of planning management and technology a great deal of research is devoted to application of instruments methodologies and tools for monitoring and acquisition of data based on the factual experience and computational modeling the objective of the book was to present works related to urban automation geographic information systems gis analysis monitoring and management of urban noise floods and transports information technology applied to the cities tools for urban simulation social monitoring and control of urban policies sustainability etc demonstrating methods and techniques applied in urban engineering considering all the interesting information presented the book can offer some aid in creating new research as well as incite the interest of people for this area of study since urban engineering is fundamental for city development

this work aims to expand the understanding of sound scattering in architectural spaces as well as the

comprehension of its influence on the auditory perception in concert halls the notion of scattering coefficient which numerically represents the physical phenomenon of sound scattering constitutes the main paradigm for the entire work in a first part the scattering coefficient is introduced in its meaning and implications new empirical data of scattering objects have been determined and a revised scale model of a reverberation chamber for avoiding measurement accuracies is presented a case study of classroom acoustics proves the benefit of experimental data on the accuracy of acoustic computer simulations furthermore the implementation of scattering coefficient in different room acoustic computer software is shown by using a concert hall as a case study in a second part the relationship between scattering coefficient and auditory perception is explored binaural impulse responses have been determined for different scenarios such as two virtual enclosed spaces and one real concert hall and convolved with music samples to be used in listening tests results from listening tests show how changes in scattering coefficient of diffusing surfaces affect the perception of music among the audience in concert halls

around the turn of the millennium it had become painfully evident that development aid charity or global business as usual were not going to be the mechanisms to alleviate global poverty today there is little dispute that poverty remains the most pressing global problem calling for innovative solutions one recent strategy is the base of the pyramid bop concept developed by prahalad and hart which relies on entrepreneurial activity tapping into the previously ignored markets of the economically most disadvantaged it is a process requiring innovations in several disciplines technological social and

business this book covers a number of areas first much of the current bop discussion emphasises targeting products to the needs of the poor but do we actually know what the real needs of the poor are this book takes a bottom up human centred approach and examines examples that truly engage the poor in bop product and service development what types of needs assessment methodologies are indicated considering the cultural differences in bop countries are the existing methodologies adequate do they need to be redefined and redeveloped second the book considers how we can balance poverty alleviation and stimulate economic growth without stressing the ecosystem tragically the poor are hardest hit by the adverse effects of environmental deterioration such as water shortages climate change or the destruction of habitats while the economic welfare of the poor is critical the bop approach must balance its inherent paradox of encouraging greater consumption while avoiding further pressures on environmental sustainability the link between the bop approach and sustainable development is a key feature of this book third it looks at innovation and asks what kinds of bottom up innovation open source technological social and business support bop initiatives and sustainable development fourth the book deals with the relationship between development assistance and bop is a bop strategy the antithesis to development aid or can these two co exist or even complement each other finally the book raises questions about the relationship between corporate responsibility and bop is bop a new form of corporate neo colonialism or a new form of corporate responsibility although the bop concept has unleashed an extensive and generally enthusiastic response from academics businesses ngos and governments the knowledge domain around this concept is still in the early stages of development this book addresses that need with a focus on the needs of the end users the poor as a starting point for bop products and innovations with contributions from both supporters and critics it provides a treasure trove of global knowledge on how

the concept has developed what its successes and failures have been and what promise it holds as a long term strategy for alleviating poverty and tackling global sustainability

i am happy to recommend this work i believe in the principles presented in it and identify with its context due to the lack of knowledge on the subject in the market it is a topic that must be made known the book should be in the library of all project and change managers paul dinsmore pmi fellow every manager should integrate hcmbook practices into their project management methodology in order to fully develop their work this book addresses a simple and practical way that the critical component in organizational change management can be applied to projects of all kinds the human factor bruno machado director project management office grupo anima educação we live in a time of change speed and an avalanche of information it is still very difficult for most companies to change their organizational culture efficiently this book makes us reflect upon the crucial element in any change and which most managers do not place in the foreground the people joyce meyer ceo idigo in today s constantly changing world the project manager must have sensitivity to how people react to change knowing a method that provides a structured way to take care of the human aspect is a key factor in the success of any project hcmbook offers a simple and practical approach to managing change which can be easily incorporated into the project management routine providing amazing results pedro augusto cardoso da silva engineering director metrÔrio this reference starts by

presenting the concept of change management its players strategies and applicable models in the second part the book covers the set of good practices methodology and tools known as the hcmbok human change management body of knowledge the third part introduces the concept of the change management office cmo and its relation to the strategic planning of an organization the book concludes with the competencies essential for a change manager an approach to agile methodologies and a model for managing cultural change

this book describes the energy law situation in brazil it focuses on three specific energy sectors oil natural gas and biofuel the decision to concentrate on these areas takes into account the role that these energy sectors play in the economic political and legal systems in brazil as well as the fact that they are the primary subjects of current discussions surrounding economic regulation in the country the book composed of thematic chapters authored by specialized legal researchers analyzes the different aspects of the oil gas and biofuels industry starting with an introduction and technical points

and followed by a discussion of the legal issues it also considers the different legal areas used to examine the aforementioned energy sectors such as regulatory law environmental law tax law international law among others the book will serve as a valuable guide for researchers interested in understanding brazilian energy law and at the same it time presents the state of the art of studies carried out in brazil

nineteenth century brazil s constitutional monarchy credibly committed to repay sovereign debt borrowing repeatedly in international and domestic capital markets without default yet it failed to lay the institutional foundations that private financial markets needed to thrive this study shows why sovereign creditworthiness did not necessarily translate into financial development using a vast array of archival evidence summerhill convincingly shows that political commitment to a secure public debt was neither necessary nor sufficient to insure financial development in nineteenth century brazil a must read for economic and financial historians and for anyone interested in the politics of financial development jean laurent rosenthal california institute of technology

this book provides a broad understanding of whether law plays a role in influencing patterns of sustainable consumption and if so how bringing together legal scholars from the global south and the global north it examines these questions in the context of national transnational and international law within single and plural legal systems and across a range of sector specific issue areas the chapters identify how traditional legal disciplines e g constitutional law consumer law public procurement international public law sector related regulation e g energy water waste and legal rules in specific areas e g eco labelling and packing engage with the concept of sustainable consumption a number of the contributions describe this relationship by isolating a national legal system while others approach it from the vantage point of legal pluralism exploring the conflicts and convergences of rules between multiple international treaties or guidelines and those between the rules of international and transnational law or both vis à vis national legal systems while sustainable consumption is recognised as an important field of interdisciplinary research linking virtually all social science disciplines legal scholarship in contrast has neglected the importance of the field of sustainable consumption to the law this book fills the gap

urbanization is a global phenomenon and the book emphasizes that this is not just a social technological process it is also a social ecological process where cities are places for nature and where cities also are dependent on and have impacts on the biosphere at different scales from local to global the book is a global assessment and delivers four main conclusions urban areas are expanding faster than urban populations half the increase in urban land across the world over the next 20 years will occur in asia with the most extensive change expected to take place in india and china urban areas modify their local and regional climate through the urban heat island effect and by altering precipitation patterns which together will have significant impacts on net primary production ecosystem health and biodiversity urban expansion will heavily draw on natural resources including water on a global scale and will often consume prime agricultural land with knock on effects on biodiversity and ecosystem services elsewhere future urban expansion will often occur in areas where the capacity for formal governance is restricted which will constrain the protection of biodiversity and management of ecosystem services
