chemistry of life stereochemistry is an important concept that often causes confusion amongst students when they learn it for the first time unlike most other areas of chemistry it requires the chemist to visualise molecules in 3d which can be difficult in this book we deal with tricky concepts like conformation and configuration how to represent them accurately and how to use the correct terms to describe them in both organic and inorganic chemistry we involved students in the writing process to ensure we deal with areas that you find difficult in an understandable language with problems designed to focus on common errors and misconceptions real life examples and practical hands on exercises coupled with visualisation tips our intention is to give you the tools to become confident in stereochemistry complementing mainstream organic textbooks or self study this book is for anyone who has struggled with describing alkenes as e or z assigning r and s absolute configurations drawing newman projections or chair representations of cyclohexanes axial chirality understanding the stereochemistry of octahedral metal complexes and indeed explaining complexities observed in nmr spectra chemistry student guides are written with current students involved at every stage guiding the books towards the most challenging aspects of the topic student co authors for
