The Economics and Politics of Climate Change

2009-10-29

the international framework for a climate change agreement is up for review as the initial kyoto period to 2012 comes to an end though there has been much enthusiasm from political and environmental groups the underlying economics and politics remain highly controversial this book takes a cool headed look at the critical roadblocks to agreement examining the economics of climate change the incentives of the main players the us eu china and examines the policies governments can put in place to reduce greenhouse gas emissions and ultimately shift our economies onto a low carbon path the volume brings together leading climate change policy experts to set out the economic analysis and the nature of the negotiations at copenhagen and beyond in addition to reviewing the main issues discussed above a number of the articles question the basis of much of the climate change consensus and debate the stern report s main findings the book is in four parts following an overview of the main issues the first part is a reassessment of the economics of climate change this is fundamental to the rest of the volume and it contains new material which goes well beyond what might be called the new conventional wisdom the second part looks at the geography of the costs and benefits of climate change the very different perspectives of africa china the us and europe these chapters provide a building block to considering the prospects for a new global agreement the very different interests that will have to be reconciled at copenhagen and beyond the third part looks at policy instruments at the global level whereas much of the literature to date is nationally and regionally based trading and r d feature in the chapters but so too do more radical unilateral options including geo engineering part four turns to the institutional architecture drawing on evidence from previous attempts in other areas as well as proposals for new bodies

china faces many modernization challenges but perhaps none is more pressing than that posed by climate change china must find a new economic growth model that is simultaneously environmentally sustainable can free it from its dependency on fossil fuels and lift living standards for the majority of its population but what does such a model look like and how can china best make the transition from its present macro economic structure to a low carbon future this ground breaking economic study led by the stockholm

environment institute and the chinese economists 50 forum brings together leading international thinkers in economics climate change and development to tackle some of the most challenging issues relating to china s low carbon development this study maps out a deep carbon reduction scenario and analyzes economic policies that shift carbon use and shows how china can take strong and decisive action to make deep reductions in carbon emission over the next forty years while maintaining high economic growth and minimizing adverse effects of a low carbon transition moreover these reductions can be achieved within the finite global carbon budget for greenhouse gas emissions as determined by the hard constraints of climate science the authors make the compelling case that a transition to a low carbon economy is an essential part of china s development and modernization such a transformation would also present opportunities for china to improve its energy security and move its economy higher up the international value chain they argue that even in these difficult economic times climate change action may present more opportunities than costs such a transformation for china and the rest of the world will not be easy but it is possible necessary and worthwhile to pursue

recent years have witnessed considerable consolidation between the disciplines of environmental and ecological economics at research level but until now textbooks in the area have done little to reflect this

ahmed hussen s book is to date the only one to reconcile the two standpoints the central focus of the book will continue to be on this systematic integration of both mainstream and ecological approaches to environmental economics and an acknowledgement that enduring solutions to major contemporary environmental challenges can be obtained through studies based on a well conceived and balanced interdisciplinary approach however this third edition also contains much that is new chiefly brand new chapters appear covering the following topics the economics of climate change the economics of biodiversity and ecosystem services green accounting and alternative economic and social indicators of sustainability the business case for environmental sustainability an appendix that provides a brief historical account of the development of ecological economics the result is a comprehensive introduction to the main facets of environmental and ecological economics a text that boldly refuses to put up barriers between disciplines and takes a holistic approach to vital issues this student friendly textbook contains a variety of study tools including learning points boxed features case studies revision questions and discussion questions and an appendix that provides students with a review of basic economic principles relevant to the study of the environment and its management written in a clear and accessible style this book will prove an excellent choice for introducing both students and academics to the world of environmental economics
