nldb 2005 the 10th international conference on applications of natural language to information systems was held on june 15 17 2005 at the university of alicante spain since the rst nldb conference in 1995 the main goal has been to provide a forum to discuss and disseminate research on the integration of natural language resources in information system engineering the development and convergence of computing telecommunications and information systems has already led to a revolution in the way that we work communicate with each other buy goods and use services and even in the way that we entertain and educate ourselves the revolution continues and one of its results is that large volumes of information will increasingly be held in a form which is more natural for users than the data presentation formats typical of computer systems of the past natural language processing nlp is crucial in solving these problems and language technologies will make an indispensable contribution to the success of information systems we hope that nldb 2005 was a modest contribution to this goal nldb 2005 contributed to advancing the goals and the high international standing of these conferences largely due to its program committee composed of renowned researchers in the field of natural language processing and information system engineering papers were reviewed by three reviewers from the program committee this clearly contributed to the significant number of papers submitted 95 twenty nine were accepted as regular papers while 18 were accepted as short papers

oracle system performance inefficiencies often go undetected for months or even years even under intense scrutiny because traditional oracle performance analysis methods and tools are fundamentally flawed they re unreliable and inefficient oracle dbas and developers are all too familiar with the outlay of time and resources blown budgets missed deadlines and marginally effective performance fiddling that is commonplace with traditional methods of oracle performance tuning in this crucial book cary millsap former vp of oracle s system performance group clearly and concisely explains how to use oracle s response time statistics to diagnose and repair performance problems cary also shows how queueing theory can be applied to response time statistics to predict the impact of upgrades and other system changes optimizing oracle performance eliminates the time consuming trial and error guesswork inherent in most conventional approaches to tuning you can determine exactly where a system s performance problem is and with equal importance where it is not in just a few minutes even if the problem is several years old optimizing oracle performance cuts a path through the complexity of current tuning methods and streamlines an approach that focuses on optimization techniques that any dba can use quickly and successfully to make noticeable even dramatic improvements for example the one thing database users care most about is response time naturally dbas focus much of their time and effort towards improving response time but it is entirely too easy to spend hundreds of hours to improve important system metrics such as hit ratios average latencies and wait times only to find users are unable to perceive the difference and an expensive hardware upgrade may not help either it doesn t have to be that way technological advances have added impact efficiency measurability predictive capacity reliability speed and practicality to the science of oracle performance optimization optimizing oracle performance shows you how to slash the frustration and expense
