<u>Let Us C Solutions</u> 2001 the book is an almost self contained presentation of the most important concepts and results in viability and invariance the viability of a set k with respect to a given function or multi function f defined on it describes the property that for each initial data in k the differential equation or inclusion driven by that function or multi function to have at least one solution the invariance of a set k with respect to a function or multi function f defined on a larger set d is that property which says that each solution of the differential equation or inclusion driven by f and issuing in k remains in k at least for a short time the book includes the most important necessary and sufficient conditions for viability starting with nagumo s viability theorem for ordinary differential equations with continuous right hand sides and continuing with the corresponding extensions either to differential inclusions or to semilinear or even fully nonlinear evolution equations systems and inclusions in the latter i e multi valued cases the results based on two completely new tangency concepts all due to the authors are original and extend significantly in several directions their well known classical counterparts new concepts for multi functions as the classical tangent vectors for functions provides the very general and necessary conditions for viability in the case of differential inclusions semilinear and fully nonlinear evolution inclusions clarifying examples illustrations and numerous problems completely and carefully solved illustrates the applications from theory into practice very clear and elegant style
