2008

the first volume of gary habermas s magnum opus on the resurrection evidences represents the culmination of fifty years of research on the probability of jesus s resurrection using his minimal facts argument habermas demonstrates why we ought to trust the biblical and historical testimony of scripture regarding the resurrection this book is a must read for pastors students and scholars interested in the historical evidence for the resurrection of jesus christ

On the Resurrection, Volume 1

2024-01-15

the familiar stories of the good samaritan the prodigal son and lazarus and the rich man were part of the cultural currency in the nineteenth century and victorian authors drew upon the figures and plots of biblical parables for a variety of authoritative interpretive and subversive effects however scholars of parables in literature have often overlooked the 19th century novel assuming that realism bears no relation to the subversive iconoclastic genre of parable in this book susan e colòn shows that authors such as charles dickens margaret oliphant and charlotte yonge appreciated the power of parables to deliver an ethical charge that was as unexpected as it was disruptive to conventional moral ideas against the common assumption that the genres of realism and parable are polar opposites this study explores how victorian novels despite their length verisimilitude and multi plot complexity can become parables in ways that imitate interpret and challenge their biblical sources

Student Response in Programmed Instruction

1961

these essays range widely throughout the history of the civil war north using new methods and sources to reexamine old theories and discover new aspects of the nation s greatest conflict many of these issues are just as important today as they were a century and a half ago what were the extent and limits of wartime dissent in the north how could a president most effectively present himself to the public can the savagery of war ever be tamed how did african americans create and maintain their families

Victorian Parables

the relationship between infection and immunity and autophagy a pathway of cellular homeostasis

and stress response has been a rapidly growing field of study over the last decade while some cellular processes are pro or anti infection autophagy has been proven to be both a part of the innate immune response against some microbes and a cellular pathway subverted by some pathogens to promote their own replication autophagy infection and the immune response provides a unified overview of the roles of cellular autophagy during microbial infection introductory chapters ground the reader by delineating the autophagic pathway from a cellular perspective and by listing assays available for measuring autophagy subsequent chapters address virus interactions with autophagy machinery the various roles of autophagy parasitic infection and interactions of bacteria with the autophagic pathway concluding chapters explore the relationships of autophagy to systemic immune responses including antigen presentation er stress and production of ifn gamma designed as a resource for those interested in initiating studies on the relationship between autophagy and infection or immunity autophagy infection and the immune response combines practical state of the art technique descriptions with an overview of the wide variety of known interactions between pathogens and the autophagic pathway

pathogens respond dynamically to their environment understanding their behavior is critical for two important reasons because of emerging evidence of increased pathogen resistance to established sanitation and preservation techniques and because of the increased use of minimal processing technologies which are potentially more vulnerable to the development of resistance understanding pathogen behavior virulence stress response and resistance collects and summarizes the wealth of recent research in this area and its implications for microbiologists and qa staff in the food industry isbn 1 85573 953 4

Proceedings of a Meeting on Traceability for Ionizing Radiation

Measurements

1982

when environmental conditions deviate from the optimal range stress ensues stress response is a set of reactions that allow the organism to adjust and survive adverse conditions stress can be physical such as extreme temperature radiation injury or psychological caused by perceived danger or deprivation every living cell has biochemical mechanisms to cope with physical stress these mechanisms show a degree of similarity among several types of living organisms stress response and immunity links and trade offs explores the functional and evolutionary connections between stress response and immunity the book introduces the reader to the concept of stress and subsequently examines the connection between stress response and immunity at various evolutionary stages of living organisms from bacteria to humans the book also features chapters dedicated to the role of tumor suppressor genes and the immune system of the brain the information presented in this reference demonstrates the profound effects of physical and psychological stress on human health readers with basic knowledge of molecular biology will learn about the interesting facets of stress responses and the evolutionary trade offs observed in different life forms

Autophagy, Infection, and the Immune Response

psychological anthropology a reader in self in culture presents a selection of readings from recent and classical literature with a rich diversity of insights into the individual and society presents the latest psychological research from a variety of global cultures sheds new light on historical continuities in psychological anthropology explores the cultural relativity of emotional experience and moral concepts among diverse peoples the freudian influence and recent psychoanalytic trends in anthropology addresses childhood and the acquisition of culture an ethnographic focus on the self as portrayed in ritual and healing and how psychological anthropology illuminates social change

Supplemental Appropriation Bill, 1978

1977

encouraging the incorporation of molecular biology techniques into the experimental approach to

various toxicological problems the format of the book is two staged each chapter first introduces how various molecular techniques can be successfully applied to solving a specific toxicology question and proceeds to describe the techniques themselves also included is a discussion of the benefits and limitations of these techniques this book will prove of value to practising researchers but also to graduate students dealing with conceptual issues relating to molecular toxicology

Hearing Relating to Communist Activities in the Defense Area of Baltimore

1951

intracellular pathogens such as bacteria and parasites have evolved specialized mechanisms to survive and replicate in their host leading to disorders and diseases the principle of these mechanisms is to reprogram the microbicidal cell function in order to disable the host cells defence that aims to control and eliminate foreign invaders devoid of their defence cells become permissive to pathogens invasion the aim of this research topic is to highlight and cover recent understanding of mechanisms and molecules used by pathogens to interfere with the microbicidal function of cells this research topic will focus on the reprogramming of the cellular dynamics the immune response the phagolysosome biogenesis and the signal transduction pathways bypathogens special attention will be made on non proteic virulence factors however this research topic is not restricted to non proteic virulence factors

Communist Activities Hearings Before the Committee on Un-American Activities, House of Representatives, Eighty-second Congress, First-second Sessions

1951

it has been some time since catholic and liberal protestant theologians stopped writing seriously on bibliology meanwhile conservative evangelical theologians guard against the introduction of new ideas in an effort to make headway through this gridlock carlos bovell has commissioned a roundtable discussion on the prospect of whether the inspiration of scripture might extend beyond authors and texts and if so what this might entail for the authority of scripture taken together the essays in this volume make an invaluable contribution to contemporary literature on the

Miller Levine Biology 1e Lab Manual a (Average Advanced) Student Edition 2002c

Molecular Biology of the Toxic Response

1998-10-14

autophagy in immune response impact on cancer immunotherapy focuses on the status and future directions of autophagy with respect to different aspects of its interaction with the immune system and immunotherapy the book takes scientific research in autophagy a step further by presenting reputable information on the topic and offering integrated content with advancements in autophagy from cell biology and biochemical research to clinical treatments this book is a valuable source for cancer researchers oncologists graduate students and several members of biomedical field who are interested in learning more on the relationship between autophagy and immunotherapies presents updated knowledge on autophagy at the basic level and its potential use in cancer treatment offers the first book to cover autophagy at the interface of cell biology immunology and tumor biology provides a wealth of information on the topic in a coherent and comprehensive collection of contributions by world renowned scientists and investigators

Manipulation of the cellular microbicidal response and endocytic dynamic by pathogens membrane factors

2015-07-10

the eld of cellular responses to dna damage has attained widespread recognition and interest in recent years commensurate with its fundamental role in the ma tenance of genomic stability these responses which are essential to preventing cellular death or malignant transformation are organized into a sophisticated s tem designated the dna damage response this system operates in all living organisms to maintain genomic stability in the face of constant attacks on the dna from a variety of endogenous by products of normal metabolism as well as exogenous agents such as radiation and toxic chemicals in the environment the response repairs dna damage via an intricate cellular signal transduction network that coordinates with various processes such as regulation of dna replication tr scriptional responses and temporary cell cycle arrest to allow the repair to take place defects in this system result in severe genetic disorders involving tissue degeneration sensitivity to speci c damaging agents immunode ciency genomic instability cancer predisposition and premature aging the nding that many of the crucial players involved in dna damage response are structurally and functionally conserved in different species spurred discoveries of new players through similar analyses in yeast and mammals we now understand the chain of events that leads to instantaneous activation of the massive cellular responses to dna lesions this book summarizes several new concepts in this rapidly evolving eld and the advances in our understanding of the complex network of processes that respond to dna damage

Intelligence Oversight Act of 1988

1988

psychoendocrinology covers the advances in the field of biology and the development of highly refined measurement techniques for hormones the book discusses the partitioning of neuroendocrine steroids and peptides between vascular and cerebral compartments the mechanisms of the female reproductive behavior and the sensory hormonal and neural determinant of maternal behavior the text describes the effects of sexual behavior on gonadal function in rodents the hormonal regulation of learning performance and the hormonal modulation of memory the psychobiological perspective on the psychoneuroendocrinology of stress and the behavioral effects of the endogenous opioids are also considered the book further tackles the hormonal interactions on temperature regulation and temperature regulation under modified physiological states endocrinologists

psychobiologists neurologists neurobiologists and students taking related courses will find the book useful

tens of thousands of chemicals are released into the environment every day high throughput screening hts has offered a more efficient and cost effective alternative to traditional toxicity tests that can profile these chemicals for potential adverse effects with the aim to prioritize a manageable number for more in depth testing and to provide clues to mechanism of toxicity the tox21 program a collaboration between the national institute of environmental health sciences niehs national toxicology program ntp the u s environmental protection agency s epa national center for computational toxicology ncct the national institutes of health nih national center for advancing translational sciences neats and the u s food and drug administration fda has generated quantitative high throughput screening ghts data on a library of 10k compounds including environmental chemicals and drugs against a panel of nuclear receptor and stress response pathway assays during its production phase phase ii the tox21 challenge a worldwide modeling competition was launched that asks a crowd of researchers to use these data to elucidate the extent to which the interference of biochemical and cellular pathways by compounds can be inferred from chemical structure data in the challenge participants were asked to model twelve assays related to nuclear receptor and stress response pathways using the data generated against the tox21 10k compound library as the training set the computational models built within this challenge are expected to improve the community s ability to prioritize novel chemicals with respect to potential concern to human health this research topic presents the resulting computational models with good predictive performance from this challenge

Handbook of Research on Educational Communications and Technology

2004

this book highlights the latest advances made in the niche area of reactive oxygen species and redox processes in plants it offers a valuable guide for researchers and students alike providing insights into sensing detox scavenging the role in oxidative deterioration and signaling associated with redox regulatory processes in plants the book also dramatically demonstrates how these amazingly resourceful molecular species and radicals are poised at the core of a sophisticated network of signaling pathways and act as vital regulators of plants cell physiology and cellular responses to the environment the molecular language associated with ros mediated signal transduction which produces modulations in gene expression that determine plants stress acclamatory performance is also discussed the book subsequently provides information on current trends in redox proteomics and genomics which include efforts to gain a fuller understanding of these redox players role in cellular processes and to further the application of this knowledge to technology and agriculture given its scope and format the book offers a valuable asset for students of plant sciences agriculture and molecular biology as well as readers engaged in research on and teaching ros biology
