forty five years after women s liberationists first laid down their challenge chanting women demand equality and i m a second class citizen their narratives are now so universally accepted that few people dare speak truth to the power in the land that feminism has undoubtedly become however this book does just that opening with a startling revelation in 2014 by mallory millett sister of kate millett a mentally ill marxist apologist and probably the prime mover in the women s liberation movement around 1970 their angry creed is a detailed exposé of what she and her co conspirators were planning from the start the author shows how these activists influenced a generation of women many of whom are now in prominent and powerful positions to seek a seismic shift in the power balance between women and men by dividing society along the fault line of gender feminism has never been about equality for women it is cultural marxism whose principles uphold matriarchy the social superiority of women which is to be achieved through the destruction of marriage the re engineering of the family moving women en masse out of the home and into the workforce and the disruption of society as we know it describing how these activists have already secured unreasonable and unfair privilege for women and girls he points to the demonisation of manhood men s effective social emasculation the invasion of men s social spaces to the point of harassment and the relentless excision of fathers from families he ends by warning of a coming backlash from men

education transformation authored by the leading expert in customized online education ron packard shows why technology is critical to the future of education and the future of our nation s children we can no longer afford to lag the benefits of technology must be harnessed for the benefit of students nationwide and around the globe it is an imperative one size does not fit all in education education transformation shows us how technology can be used to accommodate individual s needs rather than making each student force fit into the traditional classroom model which works for many but not for all like so many other modern conveniences education can benefit from technological advancement and only technology can provide personalized instruction affordably education transformation has never been needed more than today it is the future of education and of our nation s children

in february 2018 35 000 public school educators and staff walked off the job in west virginia more than 100 000 teachers in other states both right to work states like west virginia and those with a unionized workforce followed them over the next year from arizona kentucky and oklahoma to colorado and california teachers announced to state legislators that not only their abysmal wages but the deplorable conditions of their work and the increasingly straitened circumstances of public education were unacceptable these recent teacher walkouts affirm public education as a crucial public benefit and understand the rampant disinvestment in public education not simply as a local issue affecting teacher paychecks but also as a danger to communities and to democracy strike for the common good gathers together original essays written by teachers involved in strikes nationwide by students and parents who have supported them by journalists who have covered these strikes in depth and by outside analysts academic and otherwise together the essays consider the place of these strikes in the broader landscape of recent labor organizing and battles over public education and attend to the largely female workforce and often largely non white student population of america s schools

in this masterful account a historian of science surveys the molecular biology revolution its origin and continuing impact since the 1930s a molecular vision has been transforming biology michel morange provides an incisive and overarching history of this transformation from the early attempts to explain organisms by the structure of their chemical components to the birth and consolidation of genetics to the latest technologies and discoveries enabled by the new science of life morange revisits a history of molecular biology and offers new insights from the past twenty years into his analysis the black box of biology shows that what led to the incredible transformation of biology was not a simple accumulation of new results but the molecularization of a large part of biology in fact morange argues the greatest biological achievements of the past few decades should still be understood within the molecular paradigm what has happened is not the displacement of molecular biology by other techniques and avenues of research but rather the fusion of molecular principles and concepts with those of other disciplines including genetics physics structural chemistry and computational biology this has produced

decisive changes including the discoveries of regulatory rnas the development of massive scientific programs such as human genome sequencing and the emergence of synthetic biology systems biology and epigenetics original persuasive and breathtaking in its scope the black box of biology sets a new standard for the history of the ongoing molecular revolution

of the 54 african states only south africa is categorised by the united nations industrial development organization unido amongst industrialised countries the economic activities in africa are still dominated by the production and trade of agricultural and mineral commodities this situation is in spite of the longstanding africa european union eu co operation which intends among other things to support africa s industrialisation endeavours imperatively a long road to substantive levels of industrialisation still lies ahead of most african countries this raises the question as to what role the international community could and should play in the twenty first century to provide the support needed to expedite africa s industrial transformation this book argues that to supplement the initiatives of each african country international partnerships of both a north south and south south nature will serve better purposes if they are leveraged to develop productive capacities in african economies in order to enable the african countries to leverage their traditional partnership with the eu for industrialisation a paradigm shift is obligatory a feasible model should emulate the japanese led flying geese model and the chinese led bamboo capitalism model

the term globalization has gained widespread popularity yet most treatments are either descriptive and or focused on changes in economic interconnectivity in this volume the concept is seen in broader terms as leading international experts from a range of disciplines develop a long term analysis to address the problems of globalization the editors and contributors develop a framework for understanding the origins and trajectory of contemporary world trends constructing testable and verifiable models of globalization they demonstrate how the evolutionary approach allows us to view globalization as an enterprise of the human species as a whole focusing on the analytical problem of global change and the rules governing those changes the emphasis is not on broad based accounts of the course of world affairs but selectively on processes that reshape the social of the human species the making of world opinion and the innovations that animate these developments chapters are clustered into four foci one emphasizes the interpretation of globalization as an explicitly evolutionary process a second looks at historical sequences of such phenomena as population growth or imperial rise and decline as processes that can be modeled and not purely described the third cluster examines ongoing changes in economic processes especially information technology a final cluster takes on some of the challenges associated with forecasting and simulating the complexities of globalization processes this innovative and important volume will be of interest to students and scholars across the social sciences concerned with the phenomenon of globalization

gazing into crystal balls is beyond the expertise of most scientists yet as we look further into the 21st century one does not have to be nostradamus to predict that the current genomics and proteomics revolution will have an immense impact on medical bacteriology this impact is already being re sized in many academic departments and although encroachment on routine diagnostic bacteriology particularly in the hospital setting is likely to occur at a slower pace it remains nonetheless inevitable therefore it is important that no one working in bacteriology should find themselves distanced from these fundamental developments the involvement of all clinical bacteriologists is essential if the significant achievements of genome sequencing and analysis are to be turned into tangible advances with resulting benefits for patient care and m agement it is our hope that genomics proteomics and clinical bacteriology methods and reviews will play a part in bringing such a development to fruition the advances in genomics and proteomics have already given us frequent opportunities to reassess our knowledge and understanding of established b terial adversaries and have provided us with the means to identify new foes the new knowledge gained is enabling us to reconsider for example our c cepts of bacterial pathogenicity phylogeny and novel targets for antibacterial chemotherapy these topics and others are considered in genomics proteomics and clinical bacteriology methods and reviews
