U.S. Department of the Interior, Grand Canyon National Park, Grand Canyon, Arizona

1965

arizona ranks very high among the states in the richness and diversity of its flora approximately 3 200 species of flowering plants and ferns growing without cultivation are known to occur within its limits many other species have been collected so near the borders of arizona that they are almost certain to be found in the state it therefore seems appropriate that the united states department of agriculture should undertake publication of a flora of arizona

Lower Colorado River Basin Project

1966

this research report is intended to examine the geometric standards guidelines and practices used nationally and by other states to develop recommendations on roundabout design guidance for california this research serves as a guidance tool in support of caltrans policy and standards within the highway design manual and other statewide documents recommendations made from this research will guide caltrans and other agencies in california in designing and operating roundabouts several major areas were examined through this project including assessing the operational performance of california roundabouts and developing calibrated capacity models consistent with recent national research nchrp 3 65 developing a calibrated intersection sight distance model examining pedestrian and bicycle behavior at existing california roundabouts and comparing their performance to national observations and developing a range of recommendations on geometric design parameters including vehicle speeds design vehicle inscribed circle diameter and issues related to roundabouts with more than four legs roundabouts at freeway interchange terminals and roundabouts in high speed environments the research resulted in a number of recommendations regarding the fundamental principles behind these elements illustrated by tables and figures

Lower Colorado River Basin Project

1987

the world's deserts are sufficiently large that in theory covering a fraction of their landmass with pv systems could generate many times the current primary global energy supply in three parts this study details the background and concept of vls pv maps out a development path towards the realization of vls pv systems and provides firm recommendations to achieve long term targets this represents the first study to provide a concrete set of answers to the questions that must be addressed in order to secure and exploit the potential for vls pv technology and its global benefits
