every day school aged children encounter a wide variety of hazards that occur both outside and inside schools this document presents findings of a report that examined the scientific data on the risks for student injury and illness in the school environment the information is designed to help administrators set priorities for reducing risks to students the report focuses on the risks that students between 5 to 18 years old encounter while they are at school on the school grounds at school related activities and traveling to and from school key findings include 1 the two leading causes of death in school aged children are motor vehicles and firearms however relatively few of these deaths occur in schools or on school buses 2 quite often the relative safety of schools on a national average basis is unknown and 3 schools contribute to the risks of injury or illness in school aged children however little is known about schools contribution to nonfatal illness and injury finally national data particularly for environmental hazards were usually inadequate to assess the risks to students data are presented for incidence of unintentional injuries including playground related school athletics transportation school bus related pedestrian injuries along with data for intentional injuries including school associated violent deaths and weapons information is presented for illness caused by environmental hazards such as asbestos and lead and for those that arise from exposure to infectious agents suggestions for comparing

and managing risks are offered references accompany each chapter eight figures and 35 tables are included lmi

Principles of Health and Safety at Work

2015-06-22

the seventh in a series of occupational respiratory disease surveillance reports produced by the nat inst for occupational safety and health niosh it presents summary tables and figures of occupational respiratory disease surveillance data focusing on various occupationally relevant respiratory diseases including pneumoconiosis occupational asthma and other airways diseases and several other respiratory conditions for many of these diseases selected data on related exposures are also presented extensive charts and tables

NIOSH Publications Catalog

1984-08

history of risk assessment in toxicology guides the reader through the historical narrative of the evolution of risk assessment thinking in human and environmental practices risk assessment concepts are used in many different professional practice areas in the health and environmental practices of risk assessment the critical issue is often what chemical concentration in air water food or a solid substance is acceptable or considered not to result in any adverse effect the book reviews examples from early scientific and health studies to showcase the foundations of risk assessment the book also explores the development of risk assessment as practiced by major regulatory bodies such as the us food and drug administration fda the occupational safety health administration osha and the us environmental protection agency epa to reveal how risk assessment has evolved in the 20th and 21st centuries modern technology has created opportunities in silicon in vitro computational modeling omics and big data techniques to assess the toxicity of chemicals while traditional approaches to risk assessment are being challenged with new and innovative approaches finally

current issues being debated and tested in risk assessment are outlined with possible future avenues suggested presents the first dedicated history on the evolution of risk assessment in toxicology reviews the development of major us and eu regulatory bodies provides a context to current debates surrounding the future of risk assessment reviews examples from early scientific and health studies to showcase the foundations of risk assessment
