all too often public policy textbooks offer a basic grounding in the policy process without the benefit of integrating the use of policy analysis. Kraft and Furlong, since their first edition, take a different tack: they want students to understand how and why policy analysis is used to assess policy alternatives, not only to question the assumptions of policy analysts but to recognize how analysis is used in support of political arguments to encourage critical and creative thinking on issues ranging from the financial bailout to rising gas prices to natural disasters. The authors introduce and fully integrate an evaluative approach to policy. Public policy starts with a concise review of institutions, policy actors, and major theoretical models. The authors then discuss the nature of policy analysis and its practice and show students how to employ evaluative criteria in six substantive policy areas. Public policy arms students with analytic tools they need to understand the motivations of policy actors both within and outside of government, influence a complex yet comprehensible policy agenda, and enhancements to the 4th edition. All chapters have been comprehensively updated to include recent events, issues, and policy debates, including the conduct of the wars in Afghanistan and Iraq, the use of private contractors for military support and operations, the rising cost of gasoline and disputes over energy policy and climate change, the controversy over immigration policy, requirements for financial regulation, heightened concerns over economic and social inequality, and the clash over reforming taxes and entitlement programs, as well as dealing with the federal deficit and national debt. New and updated working with sources and steps to analysis features help students investigate sources of information and apply evaluative criteria. New and updated end-of-chapter discussion questions, suggested readings, and web sites.

the western american landscape has always had great significance in american thinking requiring an unlikely union between frontier mythology and the reality of a fragile western environment additionally it has borne the burden of being a gendered space seen by some as the traditional virgin land of the explorers and pioneers subject to masculine desires and by others as a masculine space in which the feminine is neither desired nor appreciated both wallace stegner and cormac mccarthy focus on this landscape and environment its spiritual narrative symbolic imaginative and ideological force is central to their work in this study mcgilchrist shows how their various treatments of these issues relate to the social climates pre and post vietnam era in which they were written and how despite historical discontinuities both stegner and mccarthy reveal a similar unease about the effects of the myth of the frontier on american thought and life the gendering of the landscape is revealed as indicative of the attempts to deny the failure of the myth and to force the often numinous western landscape into parameters which will never contain it stegner s pre vietnam sensibility allows the natural world to emerge tentatively triumphant from the ruins of frontier mythology whereas mccarthy s conclusions suggest a darker future for the west in particular and america in general however mcgilchrist suggests that the conclusion of mccarthy s border trilogy upon which her arguments regarding mccarthy are largely based offers a gleam of hope in its final conclusion of acceptance of the feminine

this classic work is an exploration of what natural history is and a sustained effort to see how it relates to other areas of biology marston bates did not attempt to overwhelm his audience with facts or overinterpret those he did use and perhaps for this reason the nature of natural history is a timeless work the author s genuine interest in the tropics has a very current feeling and the first ten or fifteen chapters of the work have a style that is parallel to that of david attenborough s verbal presentations of nature from the book i have already made several remarks about the connection between parasitism and degeneracy i suspect this is a matter of point of view we are predatory animals ourselves and consequently admire the characteristics of predationagility speed cunning self reliance we feel a certain kinship with
