a pharmacologist and a veterinarian pull back the curtain on the human and animal health effects of hydraulic fracturing or fracking across the country fracking the extraction of natural gas by hydraulic fracturing is being touted as the nation's answer to energy independence and a fix for a flagging economy drilling companies assure us that the process is safe politicians push through drilling legislation without a serious public health debate and those who speak out are marginalized their silence purchased by gas companies and their warnings about the dangers of fracking stifled the real cost of fracking pulls back the curtain on how this toxic process endangers the environment and harms people pets and livestock michelle bamberger a veterinarian and robert oswald a pharmacologist combine their expertise to show how contamination at drilling sites translates into ill health and heartbreak for families and their animals by giving voice to the people at ground zero of the fracking debate the authors vividly illustrate the consequences of fracking and issue an urgent warning to all of us fracking poses a dire threat to the air we breathe the water we drink and even our food supply bamberger and oswald reveal the harrowing experiences of small farmers who have lost their animals their livelihoods and their peace of mind and of rural families whose property values have plummeted as their towns have been invaded by drillers at the same time these stories give us hope as people band together to help one another and courageously fight to reclaim their communities the debate over fracking speaks to a core dilemma of contemporary life we require energy to live with modern conveniences but what degree of environmental degradation health risks and threats to our food supply are we willing to accept to obtain that energy as these stories demonstrate the stakes couldn't be higher and this is an issue that none of us can afford to ignore

decision making in plastic surgery edited by drs jeffrey l marsh and chad a perlyn is destined to become a favorite with all students of plastic surgery whether residents in training or experienced practitioners it provides essential tools for clinical problem solving for a wide range of aesthetic and reconstructive problems the unique format composed of algorithms with supporting text provides the reader with a virtual roadmap for navigating the decision making process that characterizes the management of plastic surgery clinical problems comprehensive coverage divided into three parts with numerous subsections and chapters this book s coverage ranges from head to toe and from reconstructive to aesthetic the first part discusses fundamentals and includes chapters on upper and lower facial lacerations acute ear trauma acute burns frostbite pressure sores and scars part ii reconstructive surgery includes comprehensive subsections on skin head and neck congenital anomalies dentoskeletal malocclusion craniofacial trauma neoplasms and reconstruction breast and trunk and upper and lower extremities and part iii aesthetic surgery contains sections on skin scalp brow and periorbital area face nose breast body contouring and body contouring after massive weight loss expert editors and contributors drs marsh and perlyn are talented educators and expert surgeons they have gathered an impressive group of rising stars and recognized leaders in plastic surgery to write chapters and share their expertise in patient management strategies for different clinical problems unique format the decision making format provides information in a convenient and accessible manner readers can compare their approach to that of the experts as they trace the decision trees outlining treatment options for different clinical problems the design and organization of the book permits quick and easy reading on the right hand page the reader finds an algorithm to indicate the problem surgical interventions and endpoints surgical and nonsurgical options and the hierarchy of what options work best for different situations on the left hand page is descriptive text that is keyed into the algorithms so the reader can easily follow the different steps being described legends introduce each section providing a key to the colored boxes bullet points and arrows that point to the different treatment options this book is essential reading for all students of plastic surgery it provides a needed life boat when planning any surgical intervention hot topics body contouring facial aesthetic surgery hand trauma facial fractures limb reconstruction breast surgery

Polymer Synthesis: Theory and Practice 1991

this massively updated and expanded fifth edition is the most complete authoritative engineering treatment of the dehydration and gas purification processes used in industry today of great value to design and operations engineers it gives practical process and equipment design descriptions basic data plant performance results and other detailed information on gas purification processes and hardware this latest edition incorporates all significant advances in the field since 1985 you will find major new chapters on the rapidly expanding

technologies of nitrogen oxide control with discussions of regulatory requirements and available processes absorption in physical solvents covering single component and mixed solvent systems and membrane permeation with emphasis on the gas purification applications of membrane units in addition new sections cover areas of strong current interest particularly liquid hydrocarbon treating claus plant tail gas treating thermal oxidation of volatile organic compounds and sulfur scavenging processes this volume brings you expanded coverage of alkanolamines for hydrogen sulfide and carbon dioxide removal the removal and use of ammonia in gas purification the use of alkaline salt solutions for acid gas removal and the use of water to absorb gas impurities the basic technologies and all significant advances in the following areas are thoroughly described sulfur dioxide removal and recovery processes processes for converting hydrogen sulfide to sulfur liquid phase oxidation processes for hydrogen sulfide removal the absorption of water vapor by dehydrating solutions gas dehydration and purification by adsorption and the catalytic and thermal conversion of gas impurities
