the volume represents presentations given at the 86th annual meeting of the psychometric society held virtually on July 19-23, 2021. About 500 individuals contributed paper presentations, symposia, poster presentations, pre-conference workshops, keynote presentations, and invited presentations. Since the 77th meeting, Springer has published the conference proceedings volume from this annual meeting to allow presenters to share their work and ideas with the wider research community while still undergoing a thorough review process. This proceedings covers a diverse set of psychometric topics including item response theory, Bayesian models, reliability, longitudinal measures, and cognitive diagnostic models.

## **New Developments in Quantitative Psychology**

2014-02-04

the 77th annual international meeting of the psychometric society brought together quantitative researchers who focus on methods relevant to psychology. The conference included workshops, invited talks by well-known scholars, and presentations of submitted papers and posters. It was hosted by the University of Nebraska-Lincoln and took place between the 9th and 12th of July 2012. The chapters of this volume are based on presentations from the

meeting and reflect the latest work in the field topics with a primarily measurement focus include studies of item response theory computerized adaptive testing cognitive diagnostic modeling and psychological scaling additional psychometric topics relate to structural equation modeling factor analysis causal modeling mediation missing data methods and longitudinal data analysis among others the papers in this volume will be especially useful for researchers graduate students and other quantitative researchers in the social sciences who use quantitative methods particularly psychologists most readers will benefit from some prior knowledge of statistical methods in reading the chapters

the role of behavioral and social sciences in the courtroom setting has expanded exponentially in the past few decades it is now widely recognized

that scientists in these areas provide critical contextual information for legal decision making and that there is a reliable knowledge base for doing so while there are many handbooks of forensic psychology this is the first such volume to incorporate sociological findings broadening the conceptual basis for examining cases in both the civil and criminal realms including immigration issues personal injury child custody and sexual harassment this volume will examine the responsibilities of expert witnesses and consultants and how they may utilize principles theories and methods from both sociology and psychology it will show these disciplines together can improve the identification and apprehension of criminals as well as enhance the administration of justice by clarifying profiles of criminal behavior particularly in cases of serial killers death threat makers stalkers and kidnappers the volume is quite comprehensive covering a range of medical school environmental and business settings throughout it links basic ideas to real applications and their impact on the justice system

psychology of behavioural interventions and pandemic control is a unique text that examines the covid 19 pandemic in relation to population risk factors and the efficacy of non pharmaceutical interventions deployed by many governments around the world to bring the pandemic under control the book presents critical and insightful lessons that can be drawn up to assess governments performance in relation to the pandemic and to guide the construction of effective measures to put in place in readiness for any future public health crises on this scale it starts by examining lessons learned from historical pandemics and then turns to early epidemiological modelling that influenced the decision of many governments to implement wide ranging interventions designed to bring public behaviour under close control it also examines the findings of research that tried to understand pre existing population risks factors which had some mediating influences over covid 19 mortality rates and the effects of interventions early modelling work is critiqued and the discussion also identifies weaknesses in early modelling research the author barrie gunter goes on to consider ways in which multiple disciplines can be triangulated to produce more comprehensive models of risk he also offers suggestions on how future pandemic related research

might be constructed to deliver more powerful analyses of the effects of interventions and the role played by different population risk factors this insight might then deliver better policies for pandemic control and for safe release from that control this is essential reading for students and researchers in psychology public health and medical sciences it would also be of interest to policy makers assessing government strategies responses and performance
