our environmental problems are huge and they require careful attention and action the twenty first century will be a crucial time in human history a time when we must find solutions that allow people on all parts of our planet to live in a clean healthy environment and have the resources they need for a good life p 5 our environmental problems are huge and they require careful attention and action the twenty first century will be a crucial time in human history a time when we must find solutions that allow people on all parts of our planet to live in a clean healthy environment and have the resources they need for a good life p 5 in a world where corporate governance scandals have become the everyday the role of business schools in producing the managers of today and tomorrow has come into sharp focus today s managers and the mbas that will follow them are in need of an education that grounds business ethics and the overarching concerns of sustainable development into the curriculum as some but by no means all organisations are coming to realise bad performance in environmental protection labour practices and human rights is no longer a soft issue but one that can hit the bottom line with a vengeance so what is the state of the art in teaching business sustainability worldwide and what teaching practices and tools are achieving successful results this book begins to answer these questions and more there are many challenges facing educators in the field of sustainability it is an evolving field still in its infancy as a management discipline and there is also the need to combat the unstated but often underlying assumption that many environmental and social issues represent non valued added effort teaching business sustainability acknowledges this problem while helping students explore the various ways in which the theoretical value of business sustainability can result in valuable and value added practical outcomes a wide mix of approaches is therefore indicated while many of these are experimental and on the leading edge of management learning they all share an experiential and often a team based element and attempt to bring together the theory in a way that makes it relevant to practitioners in the field the implication is that whenever possible educators need to link the learning to the students immediate and pressing real world realities this applies equally to undergraduates or high level executives however in the absence of immediate examples of such realities as may often be the case in undergraduate settings educators need to introduce experientially based approaches that recreate such settings in the classroom the book also argues the case for holistic and interdisciplinary learning it is clear from much of the literature on sustainability that the concept does not easily lend itself to being pigeonholed and that it crosses many of the functional areas of business indeed it goes beyond just business learning to encompass many fields such as ecology engineering and biology if students are to move beyond the narrow perspective that conventional business studies often entail they need to be introduced to the wider vision that an interdisciplinary approach engenders the final point that emerges from this collection is that experiential learning of business sustainability often can and should be fun be it a heated exchange in a case study discussion a role play exercise or a hands on student consulting project much experiential learning seems to excite the imagination of the students and to release their creative juices the 23 contributions to teaching business sustainability have been divided into three thematic groups in the first section theory critique and ideas the authors explore and critique some of the overarching ideas and thinking behind the teaching of sustainability the next section learning from current practice contains the experiences of a number of educators and the successful and leading edge approaches that they have used the final section then outlines tools methods and approaches that can be used to teach business sustainability this last section also serves as an introduction to a second volume teaching business sustainability vol 2 which provides educators of sustainability with a series of case studies role plays and experiential exercises teaching business sustainability is an invaluable resource both for educators working in a wide range of academic disciplines looking for inspiration and guidance on how to teach business sustainability as well as for organisations looking to reinvigorate internal management education programmes to factor in corporate responsibility and sustainability issues this two volume set examines recent presidential and vice presidential debates addresses how citizens make sense of these events in new media and considers whether the evolution of these forms of consumption is healthy for future presidential

campaigns and for democracy the presidential debates of 2016 underscored how television highlights candidates and campaigns messages which provide fodder for citizens widespread use of new media to talk back to campaigns and other citizens social media will continue to affect the way that campaign events like presidential debates are consumed by audiences and how they shape campaign outcomes this two volume study is one of the first to examine the relationship between debates as televised events and events consumed by citizens through social media it also assesses the town hall debate format from 1992 to 2016 uses the lens of civil dialogue to consider how citizens watch the debates and considers the growing impact of new media commentary on candidate images that emerge in presidential and vice presidential debates televised presidential debates in a changing media environment features contributions from leading political communication scholars that illuminate how presidential debates are transforming from events that are privately contemplated by citizens to events that are increasingly viewed and discussed by citizens through social media the first volume focuses on traditional studies of debates as televised campaign events and the second volume examines the changing audiences for debates as they become consumed and discussed by viewers outside the traditional channels of newspapers cable news channels and campaign messaging readers will contemplate questions of new forms problems and possibilities of political engagement that are resulting from citizens producing and consuming political messages in new media there is no doubt among experts that the prevalence of allergic diseases has increased in many industrialized countries in recent years the reasons for this increase are unknown only suppositions exist many people focus on environmental influences however the assumption that air pollution alone is responsible for this increase seems to be too simple many other influences including the genetic predisposition of individual patients allergen exposure and possibly socioeconomic factors also have to be taken into consideration although our understanding of the complex mechanisms of allergic diseases has considerably improved thanks to the progress made in experimental immunology and allergology we still have a long way to go before this scientific knowledge is translated into new therapeutic modalities for this reason the scientific community welcomed the gathering of scientists from very different disciplines and different parts of the world at an international symposium new trends in allergy iv together with environmental allergy and allergotoxicology iii in hamburg in 1995 this volume contains the invited papers covering a wide range from basic science to practical clinical diagnosis and therapy a further unique feature of this event was the concomitant first official workshop of the environmental pollution and allergy committee of the international association of allergy and clinical immunology iaaci at which the state of scientific knowledge in this field was defined and formulated in this book harry heft examines the historical and theoretical foundations of james j gibson s ecological psychology in 20th century thought and in turn integrates ecological psychology and analyses of sociocultural processes a thesis of the book is that knowing is rooted in the direct experience of meaningful environmental objects and events present in individual environment processes and at the level of collective social settings ecological psychology in context traces the primary lineage of gibson s ecological approach to william james s philosophy of radical empiricism illuminates how the work of james s student and gibson s mentor e b holt served as a catalyst for the development of gibson s framework and as a bridge to james s work reveals how ecological psychology reciprocally can advance jamesian studies by resolving some of the theoretical difficulties that kept james from fully realizing a realist philosophy broadens the scope of gibson s framework by proposing a synthesis between it and the ecological program of roger barker who discovered complex systems operating at the level of collective social processes demonstrates ways in which the psychological domain can be extended to properties of the environment rendering its features meaningful publicly accessible and distributed across person environment processes and shows how gibson s work points the way toward overcoming the gap between experimental psychology and the humanities intended for scholars and students in the areas of ecological and environmental psychology theoretical and historical psychology cognitive science developmental psychology anthropology and philosophy this title was first published in 2003 over the decades experiential methods have become an established research tool in environmental economics economists working in this area have realised that experimental methods from economics and other disciplines such as psychology and decision theory can be applied to gain insight into the behavioral underpinnings of environmental policy economic experiments in the lab and field are an attractive tool to address the incentive and contextual questions that arise in environmental policy

experiments have been and continue to be designed to capture the key elements of market and non market choices to test theory for pattern recognition to testbed new institutions and to value public goods including environmental protection this volume collects the most significant papers in the literature that identify the underpinnings of experimental approaches are complemented by works that specifically address the use of experimental economics to identify choice under risk conflict cooperation environmental policy instruments and environmental valuation agriculture s ethical horizon third edition covers the changing environment in which practitioners of agriculture are challenged to produce food for the world fully revised and updated the book encourages discussions on the moral questions that agriculture faces including what goals should agricultural science pursue and how should practitioners address important ethical questions which are different and more complex than the dominating questions of production the book presents the story of agriculture from the blood sweat and tears era to the present genetic era including the paradox of agriculture this book is ideal for agricultural students practitioners and anyone who would like to understand the tremendous responsibility of agricultural production it presents a foundation for the important discussions and decisions that will be necessary to support the future of agriculture presents critical thinking considerations based on extensive real world experience challenges all those interested in food production to more fully explore agricultural systems fully revised and updated to include current and emerging challenges and their potential future impacts on the world s food supply this book examines the challenges and possibilities of conducting cultural environmental history research today disciplinary commitments certainly influence the questions scholars ask and the ways they seek out answers but some methodological challenges go beyond the boundaries of any one discipline the book examines how to account for the fact that humans are not the only actors in history yet dominate archival records how to attend to the non visual senses when traditional sources offer only a two dimensional non sensory version of the past how to decolonize research in and beyond the archives and how effectively to use sources and means of communication made available in the digital age this book will be a valuable resource for those interested in environmental history and politics sustainable development and historical geography environment and society connects the core themes of environmental studies to the urgent issues and debates of the twenty first century in an era marked by climate change rapid urbanization and resource scarcity environmental studies has emerged as a crucial arena of study assembling canonical and contemporary texts this volume presents a systematic survey of concepts and issues central to the environment in society such as social mobilization on behalf of environmental objectives the relationships between human population economic growth and stresses on the planet s natural resources debates about the relative effects of collective and individual action and unequal distribution of the social costs of environmental degradation organized around key themes with each section featuring questions for debate and suggestions for further reading the book introduces students to the history of environmental studies and demonstrates how the field s interdisciplinary approach uniquely engages the essential issues of the present covering global threats such as climate change population growth and loss of biodiversity as well as national state and local problems of environmental pollution energy use and natural resource use and conservation environmental policy and politics provides a comprehensive overview of u s policy making processes the legislative and administrative settings for policy decisions the role of interest groups and public opinion in environmental politics and the public policies that result it helps readers understand modern environmental policy and its implications including the need for a comprehensive and integrated approach to problem solving passing the buck is the first in depth study of the impact of federalism on canadian environmental policy the book takes a detailed look at the ongoing debate on the subject and traces the evolution of the role of the federal government in environmental policy and federal provincial relations concerning the environment from the late 1960s to the early 1990s the author challenges the widespread assumption that federal and provincial governments invariably compete to extend their jurisdiction using well researched case studies and extensive research to support her argument the author points out that the combination of limited public attention to the environment and strong opposition from potentially regulated interests yields significant political costs and limited political benefits as a result for the most part the federal government has been content to leave environmental protection to the provinces in effect the federal system has allowed the federal government to pass the buck to the provinces and shirk the political challenge of environmental protection human

induced environmental change currently represents the single greatest threat to global biodiversity species are typically adapted to the local environmental conditions in which they have evolved changes in environmental conditions initially influence behaviour which in turn affects species interactions population dynamics evolutionary processes and ultimately biodiversity how animals respond to changed conditions and how this influences population viability is an area of growing research interest yet despite the vital links between environmental change behaviour and population dynamics surprisingly little has been done to bridge these areas of research behavioural responses to a changing world is the first book of its kind devoted to understanding behavioural responses to environmental change the volume is comprehensive in scope discussing impacts on both the mechanisms underlying behavioural processes as well as the longer term ecological and evolutionary consequences drawing on international experts from across the globe the book covers topics as diverse as endocrine disruption learning reproduction migration species interactions and evolutionary rescue contents 1 growing alarm over the harm done by humans to the natural world and even to the viability of our own industrial civilization compels us to ask the deeper moral question what should be the human relationship to nature matthew r foster starts by assessing three contrasting patterns of moral reasoning the progress ethic that created the world we live in the biblically inspired stewardship ethic and the connection ethic based on scientific understanding of the interdependence of all natural entities critical analysis reveals that none of these ethics is able to sustain the values it advocates due to two unsupportable presumptions that the norms of human morality are commensurate with the natural world and that the value of an entity is an intrinsic property foster argues that in order for a future environmental ethic to be both logically coherent and environmentally constructive it must start from unconventional notions first because nature will never be commensurate with human moral reasoning non rational resources must be employed despite the risks involved second value resides in the relationship of one entity to another and does not belong intrinsically to either in short value is foremost a verb rather than a noun foster proposes a new paradigm attentive to the realm of value relations among all natural entities one which offers mediating opportunities between nature and morality in this new ethic there are no shoulds rather moral responsibilities to the natural entities around us are elective placing us in an unfamiliar yet potentially liberating network of relationships this book will be of interest to scholars both instructors and students of environmental ethics philosophy religion and intellectual history and all who are concerned about the environmental challenges of our time distributed to some depository libraries in microfiche this visually dynamic historical atlas chronologically covers american environmental history through the use of four color maps photos and diagrams and in written entries from well known scholars organized into seven categories each chapter covers agriculture wildlife and forestry land use and management technology and industry polluti reserve your copy now this two volume book is an outstanding reference source on all aspects of allergy and allergic diseases covering virtually every allergic condition from the immunological and molecular basis of the allergic response to future trends in allergic disease prevention this new international editorial team a b kay jeanbousquet pat holt and allen kaplan have completely revised and updated the text from both a scientific and clinical perspective references will continue to be added to the text until it goes to press making this the most up to date book available in the field this second edition consists of more than 1 800 pages contained within 98 chapters the price includes a fully searchable companion cd rom with the complete text and over 300 images from the book in full colour the importance of the effective management of the natural environment has become vital over the past few decades in different countries varying policies are implemented by governments to manage the environment both to foster growth and reduce pollution and destruction employing a broad country based approach this edited collection first published in 1986 surveys the growth nature and effectiveness of the environmental management policies implemented by governments around the world the overarching argument is that a coherent international approach is needed to deal with the problems surrounding environmental sustainability this title will be of great value to students of the natural environment sustainability and resource management presents experimental economics research focusing on issues of environmental quality and sustainability this title covers such topics as institutions for cap and trade eco tourism urban sprawl and optimal pollution control strategies

Holt Environmental Science 1996-01 our environmental problems are huge and they require careful attention and action the twenty first century will be a crucial time in human history a time when we must find solutions that allow people on all parts of our planet to live in a clean healthy environment and have the resources they need for a good life p 5

Holt Environmental Science 2000 our environmental problems are huge and they require careful attention and action the twenty first century will be a crucial time in human history a time when we must find solutions that allow people on all parts of our planet to live in a clean healthy environment and have the resources they need for a good life p 5

Holt Environmental Science 1996 in a world where corporate governance scandals have become the everyday the role of business schools in producing the managers of today and tomorrow has come into sharp focus today s managers and the mbas that will follow them are in need of an education that grounds business ethics and the overarching concerns of sustainable development into the curriculum as some but by no means all organisations are coming to realise bad performance in environmental protection labour practices and human rights is no longer a soft issue but one that can hit the bottom line with a vengeance so what is the state of the art in teaching business sustainability worldwide and what teaching practices and tools are achieving successful results this book begins to answer these questions and more there are many challenges facing educators in the field of sustainability it is an evolving field still in its infancy as a management discipline and there is also the need to combat the unstated but often underlying assumption that many environmental and social issues represent non valued added effort teaching business sustainability acknowledges this problem while helping students explore the various ways in which the theoretical value of business sustainability can result in valuable and value added practical outcomes a wide mix of approaches is therefore indicated while many of these are experimental and on the leading edge of management learning they all share an experiential and often a team based element and attempt to bring together the theory in a way that makes it relevant to practitioners in the field the implication is that whenever possible educators need to link the learning to the students immediate and pressing real world realities this applies equally to undergraduates or high level executives however in the absence of immediate examples of such realities as may often be the case in undergraduate settings educators need to introduce experientially based approaches that recreate such settings in the classroom the book also argues the case for holistic and interdisciplinary learning it is clear from much of the literature on sustainability that the concept does not easily lend itself to being pigeonholed and that it crosses many of the functional areas of business indeed it goes beyond just business learning to encompass many fields such as ecology engineering and biology if students are to move beyond the narrow perspective that conventional business studies often entail they need to be introduced to the wider vision that an interdisciplinary approach engenders the final point that emerges from this collection is that experiential learning of business sustainability often can and should be fun be it a heated exchange in a case study discussion a role play exercise or a hands on student consulting project much experiential learning seems to excite the imagination of the students and to release their creative juices the 23 contributions to teaching business sustainability have been divided into three thematic groups in the first section theory critique and ideas the authors explore and critique some of the overarching ideas and thinking behind the teaching of sustainability the next section learning from current practice contains the experiences of a number of educators and the successful and leading edge approaches that they have used the final section then outlines tools methods and approaches that can be used to teach business sustainability this last section also serves as an introduction to a second volume teaching business sustainability vol 2 which provides educators of sustainability with a series of case studies role plays and experiential exercises teaching business sustainability is an invaluable resource both for educators working in a wide range of academic disciplines looking for inspiration and guidance on how to teach business sustainability as well as for organisations looking to reinvigorate internal management education programmes to factor in corporate responsibility and sustainability issues

Holt Biology: The environment 2003 this two volume set examines recent presidential and vice presidential debates addresses how citizens make sense of these events in new media and considers whether the evolution of these forms of consumption is healthy for future presidential campaigns and for democracy the presidential debates of 2016 underscored how television highlights candidates and campaigns messages which provide fodder for citizens widespread use of

new media to talk back to campaigns and other citizens social media will continue to affect the way that campaign events like presidential debates are consumed by audiences and how they shape campaign outcomes this two volume study is one of the first to examine the relationship between debates as televised events and events consumed by citizens through social media it also assesses the town hall debate format from 1992 to 2016 uses the lens of civil dialogue to consider how citizens watch the debates and considers the growing impact of new media commentary on candidate images that emerge in presidential and vice presidential debates televised presidential debates in a changing media environment features contributions from leading political communication scholars that illuminate how presidential debates are transforming from events that are privately contemplated by citizens to events that are increasingly viewed and discussed by citizens through social media the first volume focuses on traditional studies of debates as televised campaign events and the second volume examines the changing audiences for debates as they become consumed and discussed by viewers outside the traditional channels of newspapers cable news channels and campaign messaging readers will contemplate questions of new forms problems and possibilities of political engagement that are resulting from citizens producing and consuming political messages in new media

Environmental Health Perspectives 1993 there is no doubt among experts that the prevalence of allergic diseases has increased in many industrialized countries in recent years the reasons for this increase are unknown only suppositions exist many people focus on environmental influences however the assumption that air pollution alone is responsible for this increase seems to be too simple many other influences including the genetic predisposition of individual patients allergen exposure and possibly socioeconomic factors also have to be taken into consideration although our understanding of the complex mechanisms of allergic diseases has considerably improved thanks to the progress made in experimental immunology and allergology we still have a long way to go before this scientific knowledge is translated into new therapeutic modalities for this reason the scientific community welcomed the gathering of scientists from very different disciplines and different parts of the world at an international symposium new trends in allergy iv together with environmental allergy and allergotoxicology iii in hamburg in 1995 this volume contains the invited papers covering a wide range from basic science to practical clinical diagnosis and therapy a further unique feature of this event was the concomitant first official workshop of the environmental pollution and allergy committee of the international association of allergy and clinical immunology iaaci at which the state of scientific knowledge in this field was defined and formulated

Occupational and Environmental Lung Diseases 2000 in this book harry heft examines the historical and theoretical foundations of james j gibson s ecological psychology in 20th century thought and in turn integrates ecological psychology and analyses of sociocultural processes a thesis of the book is that knowing is rooted in the direct experience of meaningful environmental objects and events present in individual environment processes and at the level of collective social settings ecological psychology in context traces the primary lineage of gibson s ecological approach to william james s philosophy of radical empiricism illuminates how the work of james s student and gibson s mentor e b holt served as a catalyst for the development of gibson s framework and as a bridge to james s work reveals how ecological psychology reciprocally can advance jamesian studies by resolving some of the theoretical difficulties that kept james from fully realizing a realist philosophy broadens the scope of gibson s framework by proposing a synthesis between it and the ecological program of roger barker who discovered complex systems operating at the level of collective social processes demonstrates ways in which the psychological domain can be extended to properties of the environment rendering its features meaningful publicly accessible and distributed across person environment processes and shows how gibson s work points the way toward overcoming the gap between experimental psychology and the humanities intended for scholars and students in the areas of ecological and environmental psychology theoretical and historical psychology cognitive science developmental psychology anthropology and philosophy

Children's Books in Print 1999-12 this title was first published in 2003 over the decades experiential methods have become an established research tool in environmental economics economists working in this area have realised that experimental methods from economics and other disciplines such as psychology and decision theory can be applied to gain insight into the behavioral underpinnings of environmental policy economic experiments in the lab and field are an

attractive tool to address the incentive and contextual questions that arise in environmental policy experiments have been and continue to be designed to capture the key elements of market and non market choices to test theory for pattern recognition to testbed new institutions and to value public goods including environmental protection this volume collects the most significant papers in the literature that identify the underpinnings of experimental approaches are complemented by works that specifically address the use of experimental economics to identify choice under risk conflict cooperation environmental policy instruments and environmental valuation

Teaching Business Sustainability 2017-11-28 agriculture s ethical horizon third edition covers the changing environment in which practitioners of agriculture are challenged to produce food for the world fully revised and updated the book encourages discussions on the moral questions that agriculture faces including what goals should agricultural science pursue and how should practitioners address important ethical questions which are different and more complex than the dominating questions of production the book presents the story of agriculture from the blood sweat and tears era to the present genetic era including the paradox of agriculture this book is ideal for agricultural students practitioners and anyone who would like to understand the tremendous responsibility of agricultural production it presents a foundation for the important discussions and decisions that will be necessary to support the future of agriculture presents critical thinking considerations based on extensive real world experience challenges all those interested in food production to more fully explore agricultural systems fully revised and updated to include current and emerging challenges and their potential future impacts on the world s food supply

Books in Print Supplement 2002 this book examines the challenges and possibilities of conducting cultural environmental history research today disciplinary commitments certainly influence the questions scholars ask and the ways they seek out answers but some methodological challenges go beyond the boundaries of any one discipline the book examines how to account for the fact that humans are not the only actors in history yet dominate archival records how to attend to the non visual senses when traditional sources offer only a two dimensional non sensory version of the past how to decolonize research in and beyond the archives and how effectively to use sources and means of communication made available in the digital age this book will be a valuable resource for those interested in environmental history and politics sustainable development and historical geography

Children's Books in Print, 2007 2006 environment and society connects the core themes of environmental studies to the urgent issues and debates of the twenty first century in an era marked by climate change rapid urbanization and resource scarcity environmental studies has emerged as a crucial arena of study assembling canonical and contemporary texts this volume presents a systematic survey of concepts and issues central to the environment in society such as social mobilization on behalf of environmental objectives the relationships between human population economic growth and stresses on the planet s natural resources debates about the relative effects of collective and individual action and unequal distribution of the social costs of environmental degradation organized around key themes with each section featuring questions for debate and suggestions for further reading the book introduces students to the history of environmental studies and demonstrates how the field s interdisciplinary approach uniquely engages the essential issues of the present

Televised Presidential Debates in a Changing Media Environment 2018-11-26 covering global threats such as climate change population growth and loss of biodiversity as well as national state and local problems of environmental pollution energy use and natural resource use and conservation environmental policy and politics provides a comprehensive overview of u s policy making processes the legislative and administrative settings for policy decisions the role of interest groups and public opinion in environmental politics and the public policies that result it helps readers understand modern environmental policy and its implications including the need for a comprehensive and integrated approach to problem solving

New Trends in Allergy IV 2012-12-06 passing the buck is the first in depth study of the impact of federalism on canadian environmental policy the book takes a detailed look at the ongoing debate on the subject and traces the evolution of the role of the federal government in environmental policy and federal provincial relations concerning the environment from the late 1960s to the early 1990s the author challenges the widespread assumption that federal and provincial governments invariably compete to extend their jurisdiction using well researched case studies and extensive

research to support her argument the author points out that the combination of limited public attention to the environment and strong opposition from potentially regulated interests yields significant political costs and limited political benefits as a result for the most part the federal government has been content to leave environmental protection to the provinces in effect the federal system has allowed the federal government to pass the buck to the provinces and shirk the political challenge of environmental protection

Ecological Psychology in Context 2001-07-01 human induced environmental change currently represents the single greatest threat to global biodiversity species are typically adapted to the local environmental conditions in which they have evolved changes in environmental conditions initially influence behaviour which in turn affects species interactions population dynamics evolutionary processes and ultimately biodiversity how animals respond to changed conditions and how this influences population viability is an area of growing research interest yet despite the vital links between environmental change behaviour and population dynamics surprisingly little has been done to bridge these areas of research behavioural responses to a changing world is the first book of its kind devoted to understanding behavioural responses to environmental change the volume is comprehensive in scope discussing impacts on both the mechanisms underlying behavioural processes as well as the longer term ecological and evolutionary consequences drawing on international experts from across the globe the book covers topics as diverse as endocrine disruption learning reproduction migration species interactions and evolutionary rescue
