the new edition of this successful manual has been carefully revised throughout to take account of recent changes and to incorporate amendments required due to the publication of the revised BS 5328 this manual provides information on all aspects of the ready mixed concrete industry from the basic materials and their properties to the production advances in ready mixed concrete technology contains the proceedings of the first international conference on ready mixed concrete held at Dundee University in Scotland from September 29 to October 1 1975 contributors focus on the significant progress that has been made in ready mixed concrete technology some practices are highlighted along with possible areas for research this text is organized around seven themes the first of which deals with plant and equipment production methods and their development in the ready mixed concrete industry are reviewed along with developments in batching plant and equipment to meet the needs of the ready mixed concrete industry the chapters that follow explore the materials used in making concrete properties of fresh and hardened concrete mix design and quality control and transportation and placing the final section discusses the economics of ready mixed concrete with emphasis on the cost of placing concrete by pump and the relative economics of alternative materials in Portland cement concrete this book will be of interest to ready mixed concrete producers their customers in the construction industry and their suppliers of concrete materials plant and equipment the FAO WHO expert meeting held in December 2014 considered microbial contamination of lipid based ready to use foods rufs and the risk of foodborne infections in the malnourished population of children that consume rufs the goals of the expert meeting were to review the status of the microbiological safety of lipid based rufs used to manage moderate acute malnutrition and severe acute malnutrition conduct a comprehensive risk assessment provide guidance to producers on the general approach and requirements for manufacturing rufs that are safe for their intended use and provide guidance to the agencies that purchase rufs on how best to judge their microbiological safety the expert committee described three approaches that purchasers of rufs might use to establish microbiological criteria to assure the safety of rufs and to communicate to manufacturers their safety expectations these approaches are i reference to existing standards established for similar low moisture foods ii determining an acceptable increase in risk over the pre existing baseline of illness from other sources of exposure and iii process verification sampling using the moving window technique the microbiological criteria derived by each of these approaches accomplish different purposes and which is most appropriate is determined by the conditions of manufacture and use vols for 1871 76 1913 14 include an
