from radical abolitionist john brown to presidential candidate bob dole to visionary environmentalist wes jackson kansas history is bursting with fascinating stories of individuals who made a difference to the nation and whose lives reveal much about our collective past prominent kansas

historian virgil dean has gathered a distinguished team of writers thomas isern craig miner and others who have crafted incisive portraits of 27 notable men and women covering 150 years of kansas and american history here are agitators who moved their fellow citizens to action over political social and economic problems not only john brown but also proslavery agitator william h russell mary elizabeth lease lecturer for the farmers alliance and populist party gerald b winrod a k a the jayhawk hitler and esther brown who challenged segregation in public schools

John Brown to Bob Dole 2006

this book traces the evolution of the speechwriting process for presidents in the white house from the administration of franklin roosevelt to the present while institutionalization of the speechwriting process has often been blamed for bland presidential rhetoric this book draws out the many varied consequences of institutionalization on the speechwriting process ultimately it concludes that the institutionalization of the process has actually served the presidency well by helping presidents avoid the adverse effects of poorly chosen words

Speechwriting in the Institutionalized Presidency 2018-04-18

this book offers an overview of the developing body of empirical research on the eisenhower presidency it provides an analysis of key features of eisenhower s staffing structure his institutional presidency his decision making and relation between the white house and cabinet

Managing The Presidency 2019-03-06

this book examines the study of american political history

Governing America *2012-03-04*

in atomic environments neil s oatsvall examines how top policymakers in the truman and eisenhower administrations used environmental science in their work developing nuclear strategy at the beginning of the cold war while many people were involved in research and analysis during the period in question it was at highest levels of executive decision making where environmental science and nuclear science most clearly combined to shape the nation s policies because making and testing weapons dealing with fallout and nuclear waste and finding uses for radioactive byproducts required advanced understanding of how nuclear systems interacted with the world policymakers utilized existing networks of environmental scientists particularly meteorologists geologists and ecologists to understand and control the united states use of nuclear technology instead of profiling individuals oatsvall focuses on executive institutions especially the leadership of the atomic energy commission aec and high level officials in the truman and eisenhower white houses including the presidents themselves by scrutinizing institutional policymaking practices and agendas at the birth of the nuclear age a constant set of values becomes clear atomic environments reveals an emerging technocratic class that consistently valued knowledge about the environment to help create and maintain a nuclear arsenal despite its existential threat to life on earth and the negative effects many nuclear technologies directly had on ecosystems and the american people alike atomic environments is divided into five chapters each of which probes a different facet of the entanglement between environment nuclear technologies and policymaking the first three chapters form a rough narrative arc about nuclear weapons chapter one situates bombs in their natural habitat by considering why nuclear tests occurred where they did and what testers thought they revealed about the natural environment and how they influenced it focusing on nuclear fallout chapter two argues that nuclear tests actually functioned as a massive uncontrolled experiment in world environments and human bodies that intermingled medicine nuclear science and environmental science chapter three shows how the environmental knowledge gained in the first two chapters led to nuclear test ban treaty talks during the eisenhower era when the advancement of environmental knowledge and the natural world itself became crucial grounds of contention in the creation of nuclear test detection and evasion systems the last two chapters step away from weapons to question how other nuclear technologies and facets of the u s nuclear program interacted with the natural world chapter four examines agriculture s place in the u s

nuclear program from breakthrough advances in agricultural science including the use of radioisotopes and the direct application of radiation to food to atomic agriculture's public relations value as a peaceful proxy which shifted the moral calculus and further leveraged the U.S. government's atomic power. Chapter five shows how knowledge of the natural world and the functioning of its systems proved important to uncovering the most effective ways to dispose of nuclear waste. Running throughout Oatvall consistently demonstrates how the natural world and the scientific disciplines that study it became integral parts of nuclear science rather than adversarial fields of knowledge. But while nuclear technologies heavily depended on environmental science to develop, those same technologies frequently caused great harm to the natural world. Moreover, while some individuals expressed real anxieties about the damage wrought by nuclear technologies, policymakers as a class consistently made choices that privileged nuclear boosterism and secrecy, prioritizing institutional values over the lives and living systems that agencies like the AEC were ostensibly charged to protect. In the end, Oatvall argues that although policymakers took their charge to protect and advance the welfare of the United States and its people seriously, they often failed to do so because their allegiance to the U.S. nuclear hierarchy blinded them to the real risks and dangers of the nuclear age.
