It's Not About the Shark 2014-11-04 it's not about the shark opens the door to the groundbreaking science of solutions by turning problems and how we solve them upside down when we have a problem most of us zero in take it apart and focus until we have it solved david niven shows us that focusing on the problem is exactly the wrong way to find an answer putting problems at the center of our thoughts shuts down our creative abilities depletes stamina and feeds insecurities it's not about the shark shows us how to transform our daily lives our work lives and our family lives with a simple but rock solid principle if you start by thinking about your problems you'll never make it to a solution if you start by thinking about a solution you'll never worry about your problems again through real life examples and psychology research david niven shows us why focusing on the problem first makes us 17 times less likely to find an answer being afraid of a problem is natural we're biologically primed to be afraid finding a problem creates power which keeps you from finding a solution working harder actually hides answers absolute confidence makes you less likely to find the answer looking away from a problem helps to see a solution listening only to yourself is one of the best ways to find an answer combining hard facts good sense and a strong dose of encouragement david niven provides fresh and positive ways to think about problem solving

The Handy Engineering Answer Book 2011 two areas have fascinated me for a long time one is the micro economic theory of consumer behavior the other one the role of space in economic processes usually the two don t go together very well in more advanced versions of microeconomic consumer theory its economic actor may face uncertainty have to allocate resources over time or have to take into account the characteristics of products but rarely deals with space he she inhabits a spaceless point economy regional science on the other hand describes and analyzes the spatial structure and development of the economy but either ignores individual decision making altogether or treats it in a rather simplistic way in this book i try to bring together these two areas of interest of mine i do this by use of the microeconomic concept of search and placing it in an explicit spatial context the result in my opinion is a theoretical concept with fascinating implications a broad set of potential implications and numerous interesting research questions after reading this book where i layout the basic idea of spatial search describe its elements and discuss some of its implications i hope the reader will share this opinion there are still plenty of unanswered research questions in this part of economic theory hopefully this book will stimulate more work along these lines
