alternative economics for the 21st century modern economics bases its view of the world on assumptions about nature and people laid down by adam smith nearly 300 years ago in a time when people traveled by horse and carriage and wrote by the light of candles we now live in a globally connected postindustrial world of digital communication and space exploration and yet our economic model remains stuck in the past in fair economics irene schoene puts forward an alternative economics that is not only relevant to our modern world of technology and industry but which also shows an awareness of environmental and geographic considerations this book is a must read for anyone who has questioned our economic model wondered how the financial crash was able to happen or wondered what we can do stop it happening again
