Nimbus-7 Total Ozone Mapping Spectrometer (TOMS) Data Products User's Guide 1996 this report forms the user s guide of sol npsol a set of fortran subroutines designed to minimize an arbitrary smooth function subject to constraints which may include simple bounds on the variables linear constraints and smooth nonlinear constraints npsol may also be used for unconstrained bound constrained and linearly constrained optimization the user must provide subroutines that define the objective and constraint functions and their gradients

all matrices are treated as dense and hence npsol is not intended for large sparse problems npsol uses a sequential quadratic programming sqp algorithm in which the search direction is the solution of a quadratic programming qp subproblem the algorithm treats bounds linear constraints and nonlinear constraints separately the hessian of each qp subproblem is a positive definite quasi newton approximation to the hessian of an augmented lagrangian function the steplength at each iteration is required to produce a sufficient decrease in an augmented lagrangian merit function each qp subproblem is solved using a quadratic programming package with several features that improve the efficiency of an sqp algorithm
