How to Hack Your Life Through Game Thinking

2017-02-12

this book merges two compatible concepts lifehacking and applied game thinking a lifehack is an old concept refitted with a new name a strategy or technique adopted in order to manage one s time and daily activities in a more efficient way essentially it is a merging of systematic thrift and frugality merged with time management and priority planning applied game thinking is a system of strategizing to maximize one s potential at the lowest possible cost these game strategies are often created as a response to a competitive situation where a player in the game of life is faced with complex challenges problems obstacles and constraints cpoc applied game thinking is a strongly influenced and loosely applied take on game theory which has garnered researchers over a dozen noble prizes with the lifehacks in the book and applied game thinking as a foundation you will be able to troubleshoot virtually any challenge the information in this book has been tried and tested daily in my own life it is not a research project but is actually a sort of how to biography much of my daily life is dedicated to the realuguru project a problem solving collaboration between many tech experts as well as game theorists professional thrifters game thinkers gamification professionals and freegans my goal in writing this book is in helping the reader to save money save time and create greater happiness it is my experience that there are certain qualities that define virtually all human behavior one of these qualities is to strategize ways to maximize our untapped potential and do so at the lowest possible physical emotional and economic cost especially when interacting with others people to a young millennial this is nothing more than a lifehack to me it is more accurately described as a lifehack game because game thinking is the most effective efficient and productive way to achieve this goal looking for a short cut is one thing doing this by mimicking the thought and behavior patterns we exhibit when playing games is something else altogether as i have stated earlier one way to view these human thought and behavior patterns is as a game in such a game the more one who prospers at the lowest possible cost to themselves and others wins prospering does not need to be defined in financial or material terms it can relate to emotional well being clarity of thought service to others and many other ways game thinking is the process of observing human interactions and modeling them to make effective decisions lifehacking with game thinking can solve any problem in life we often model or copy what we have seen or experienced before this process

is known as modeling among game thinkers modeling strategies in this way it is not about solving problems as much as it is about applications and solutions in an ideal world game theory and game thinking would be a waste of time the extraordinary person would simply do what lao tzu the great chinese taoist sage did once he realized that most people were just clueless and would never get it he left town went to a mountain community with a gatekeeper and hung out with all the other wise men and woman visionaries and sages there they could all live their lives motivated by love emotional balance clarity of thought compassion and personal contentment visionary thinkers of this type have no interest in living a zero sum life motivated by anger greed lust vanity attachment and ego the type of that seems to motivate many sadly we do not live in an ideal world we have to deal with challenges obstacles and constraints many caused by other people many of them dysfunctional to the max in addition we must confront our own inner demons all this leads to problems that might have been avoided whether it is genetics that defines the games we play or how we play them play them we must or rather lifehack them we must
